- 1- Introduction
- 2- Database for example, used in this document
- 3- Connect to the database via the "Database Development"
- 4- Create Project
- 5- Configuring Hibenate
- 6- Appendix: Error while generating the entities
- 7- Hibernate Tutorial

## 1- Introduction

This document is based on:

- Eclipse 4.5 (MARS)
- Hibernate 5.1.0.Final
- Hibernate Tools 4.3.1.Final.html

(Last update document: 21-05-2016).

The first we must be make sure you have make sure that installed **"Hibernate Tools"** on **Eclipse**. **"Hibernate Tools"** is one tool in the tools of **JBoss** -. **"JBoss Tools"**.

See more:

- [Install JBoss Tools into Eclipse](#)

## 2- Database for example, used in this document

The database used to illustrate in this tutorial is **"simplehr"**. You can refer to:

- [Sample Database](#)

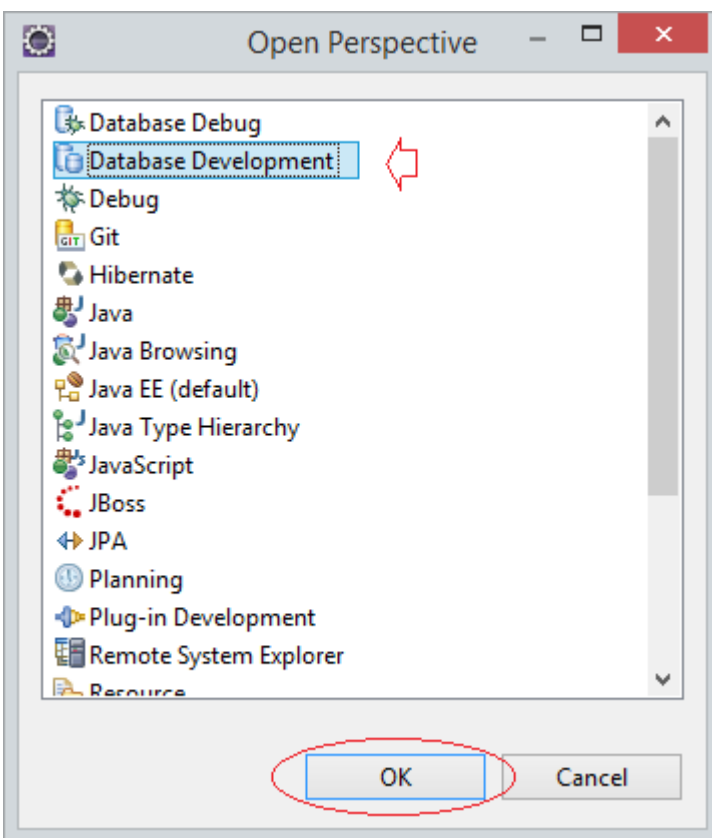

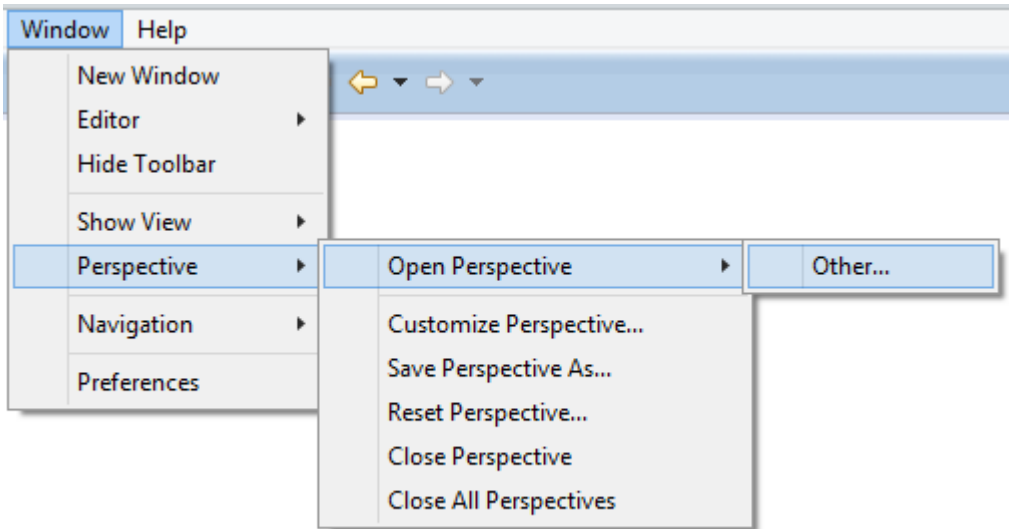

### 3- Connect to the database via the "Database Development"

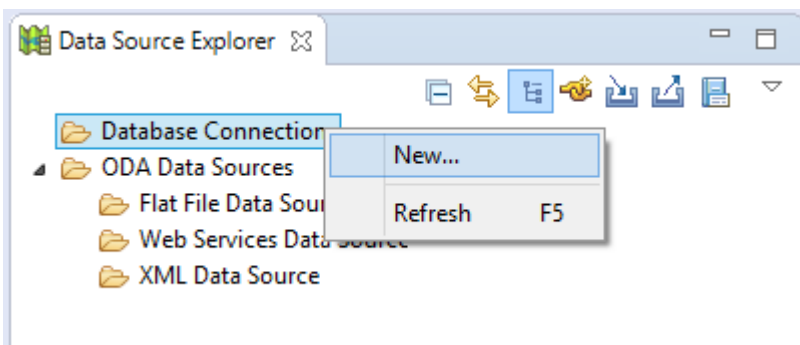

In **Eclipse** select :

- *Window/Perspective/Open Perspective/Other...*

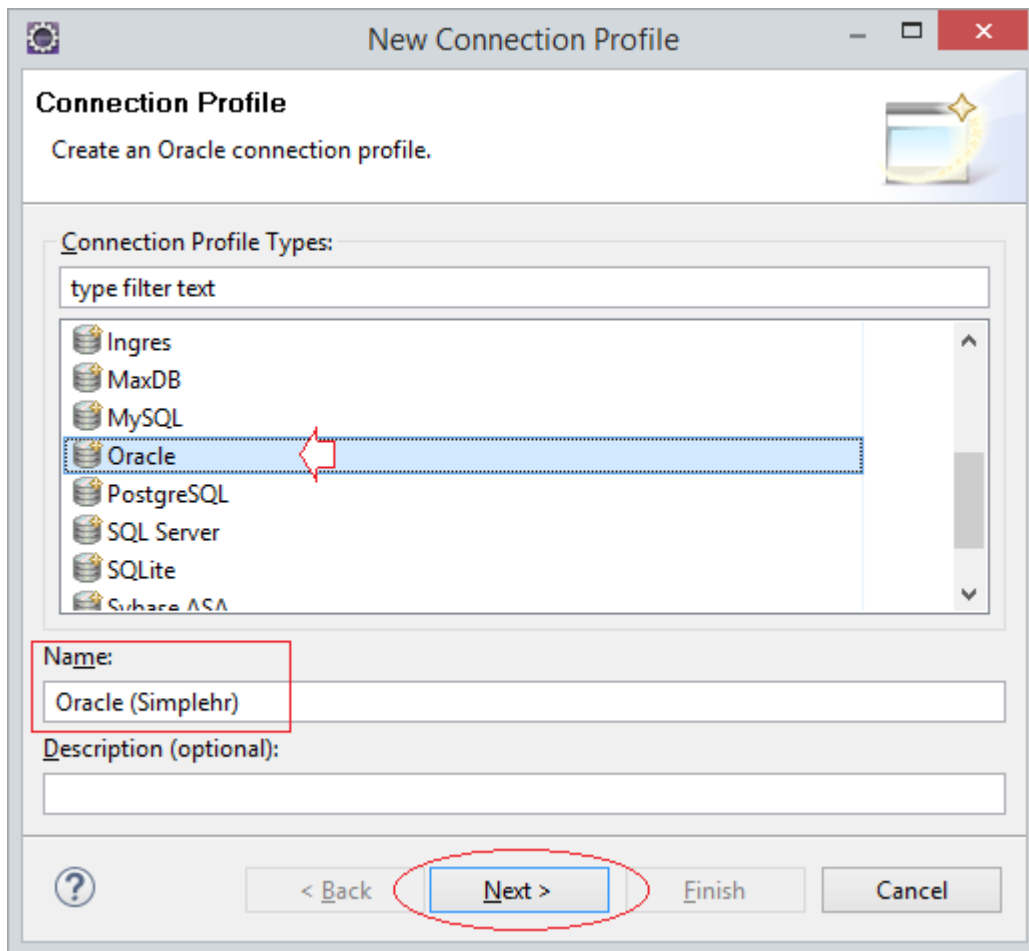

Create a new connection to the "simplehr" database:

In this tutorial I will connect to **Oracle** database. You can connect to a different database, entirely similar way.

Press to the icon, to declare **Driver** for your selected database.

**New Connection Profile**

**Specify a Driver and Connection Details**

Enter a user name.

Drivers: Oracle Thin Driver

Properties

General Optional

SID: db

Host: server

Port number: 1521

User name:

Password:

☐ Save password

Connection URL: jdbc:oracle:thin:@server:1521:db

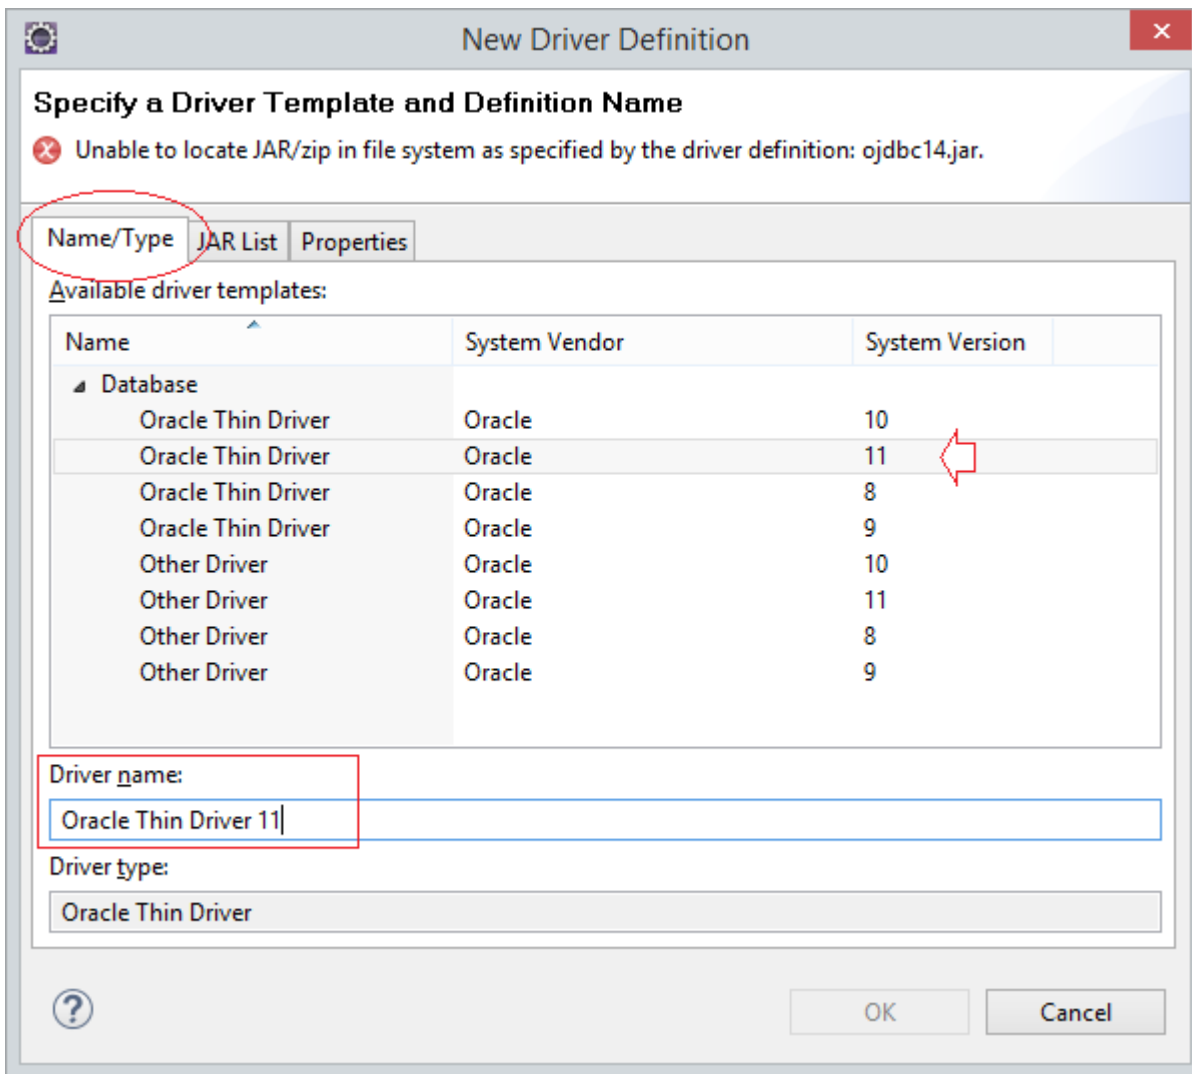

Catalog: User

☒ Connect when the wizard completes

☐ Connect every time the workbench is started

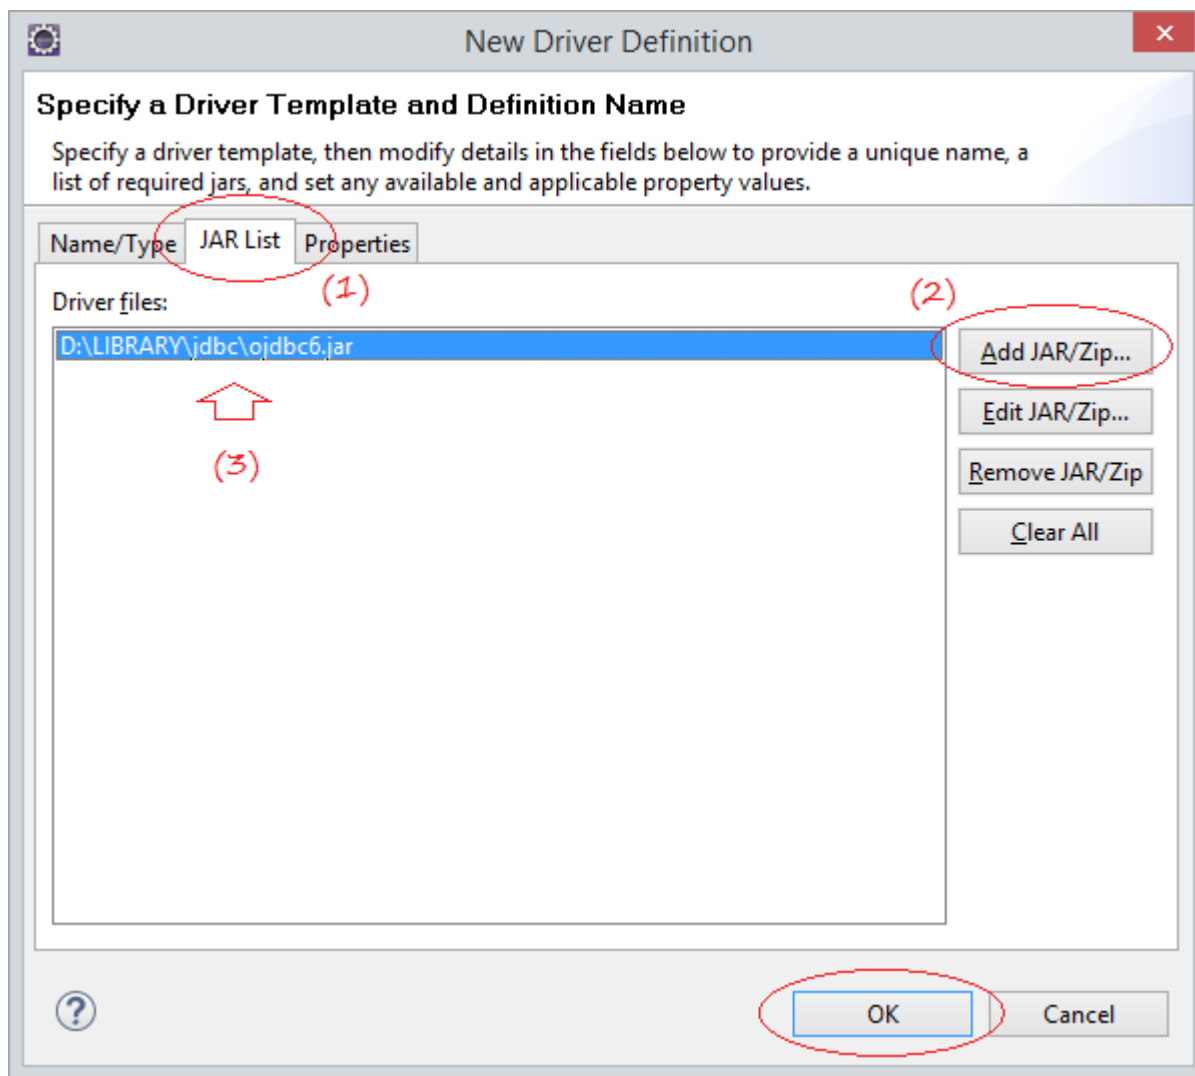

Test Connection

< Back Next > Finish Cancel

Click to "Add JAR/Zip"

Enter the information to connect to the database. Then click ***"Test Connection"*** to ensure that the database connection is successful.

**New Connection Profile**

**Specify a Driver and Connection Details**

Select a driver from the drop-down and provide login details for the connection.

Drivers: Oracle Thin Driver 11

Properties

General Optional

SID: db12c

Host: localhost

Port number: 1521

User name: simplehr

Password: •••••

☒ Save password

Connection URL: jdbc:oracle:thin:@localhost:1521:db12c

Catalog: User

☒ Connect when the wizard completes

☐ Connect every time the workbench is started

**Test Connection**

**< Back** **Next >** **Finish** **Cancel**

**Success**

**i** Ping succeeded!

**OK**

**New Connection Profile**

**Specify a Driver and Connection Details**

Select a driver from the drop-down and provide login details for the connection.

Drivers: Oracle Thin Driver 11

**Properties**

**General** **Optional**

SID: db12c

Host: localhost

Port number: 1521

User name: simplehr

Password: •••••

☒ Save password

Connection URL: jdbc:oracle:thin:@localhost:1521:db12c

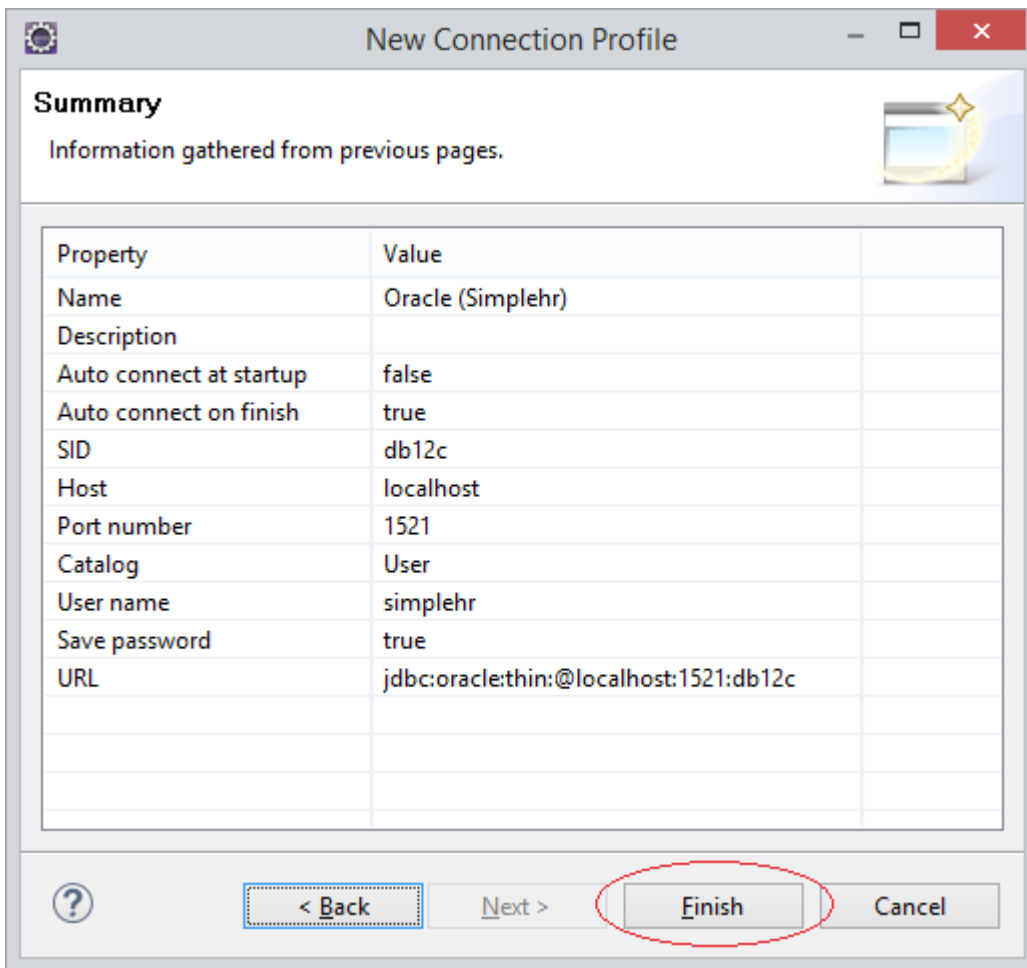

Catalog: User

☒ Connect when the wizard completes

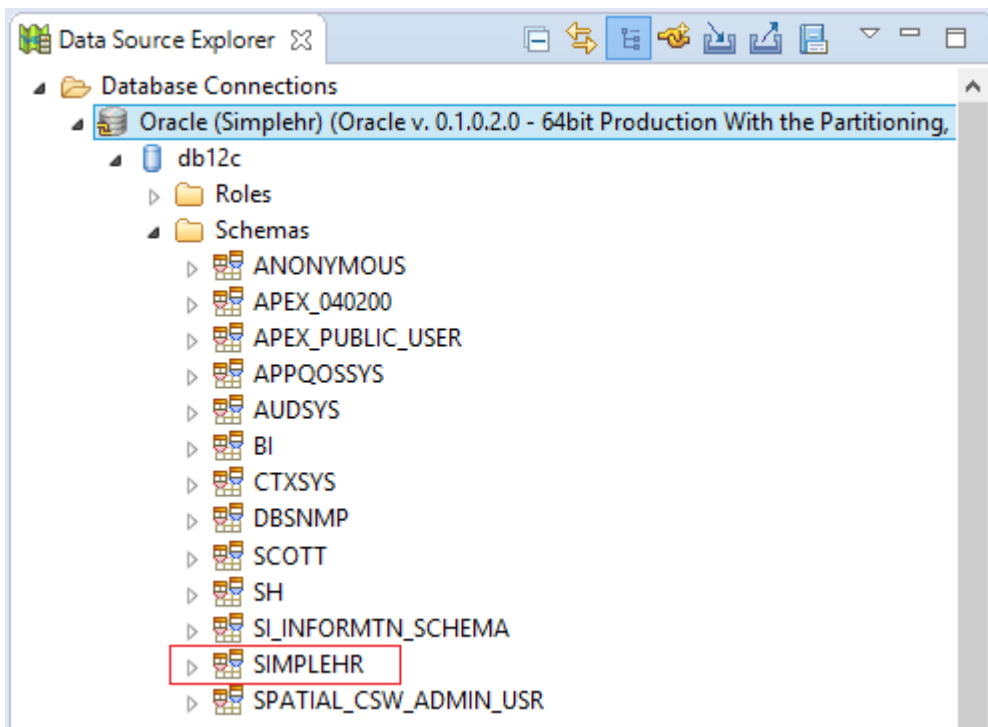

☐ Connect every time the workbench is started

**Test Connection**

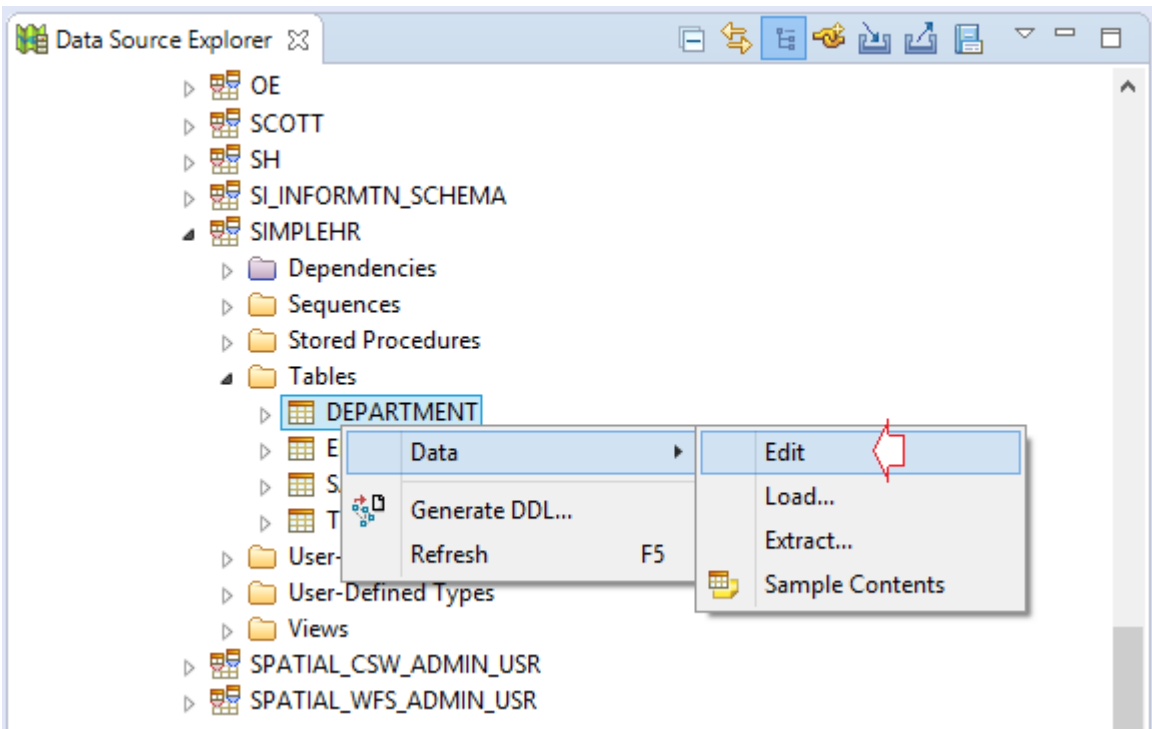

? < Back **Next >** Finish Cancel

You can see the structure of your database in the *"Data Source Explorer"*.

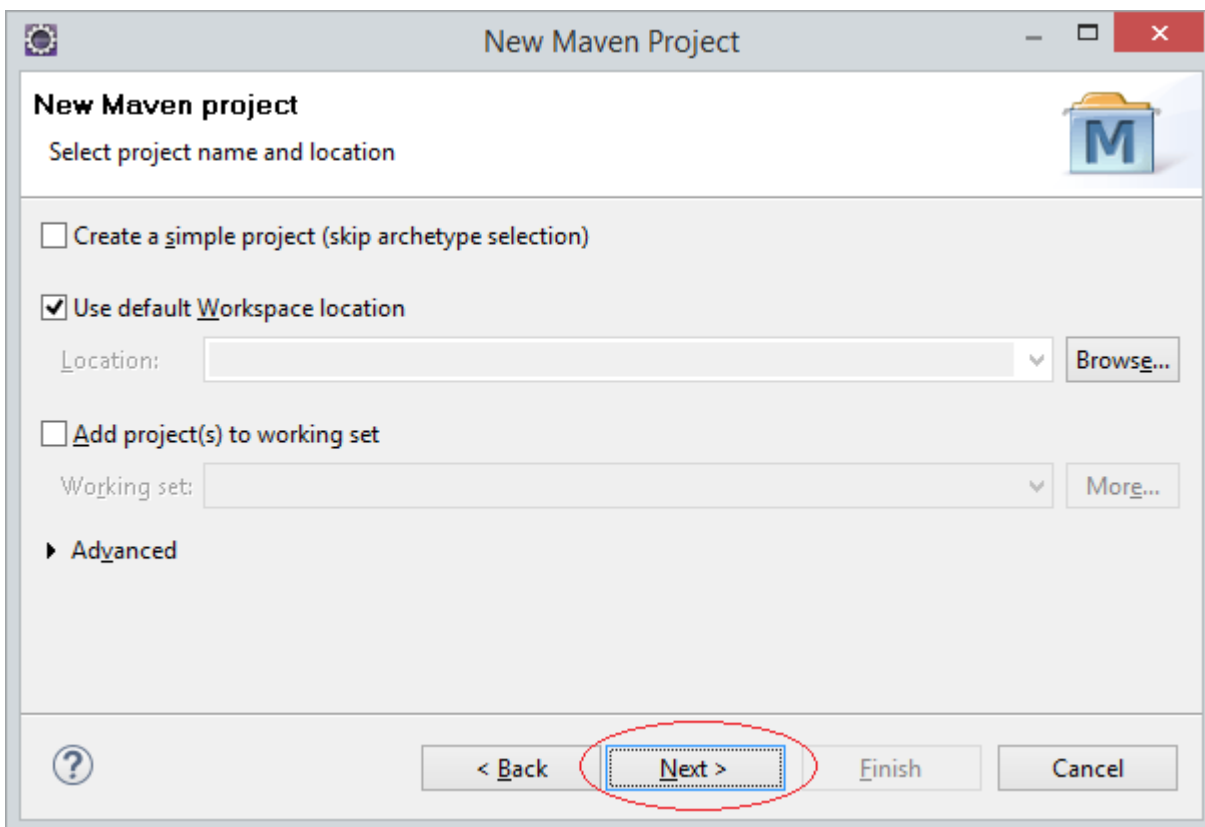

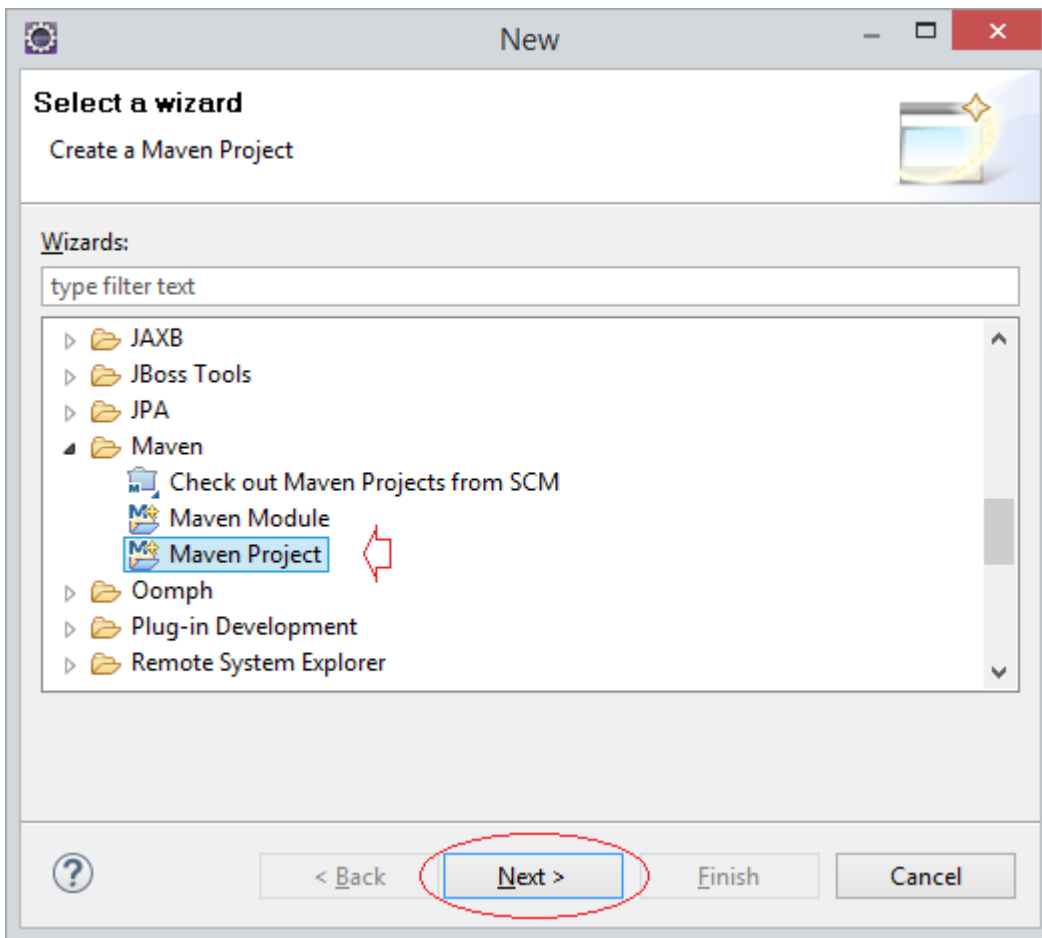

Try to **query** data in a table.

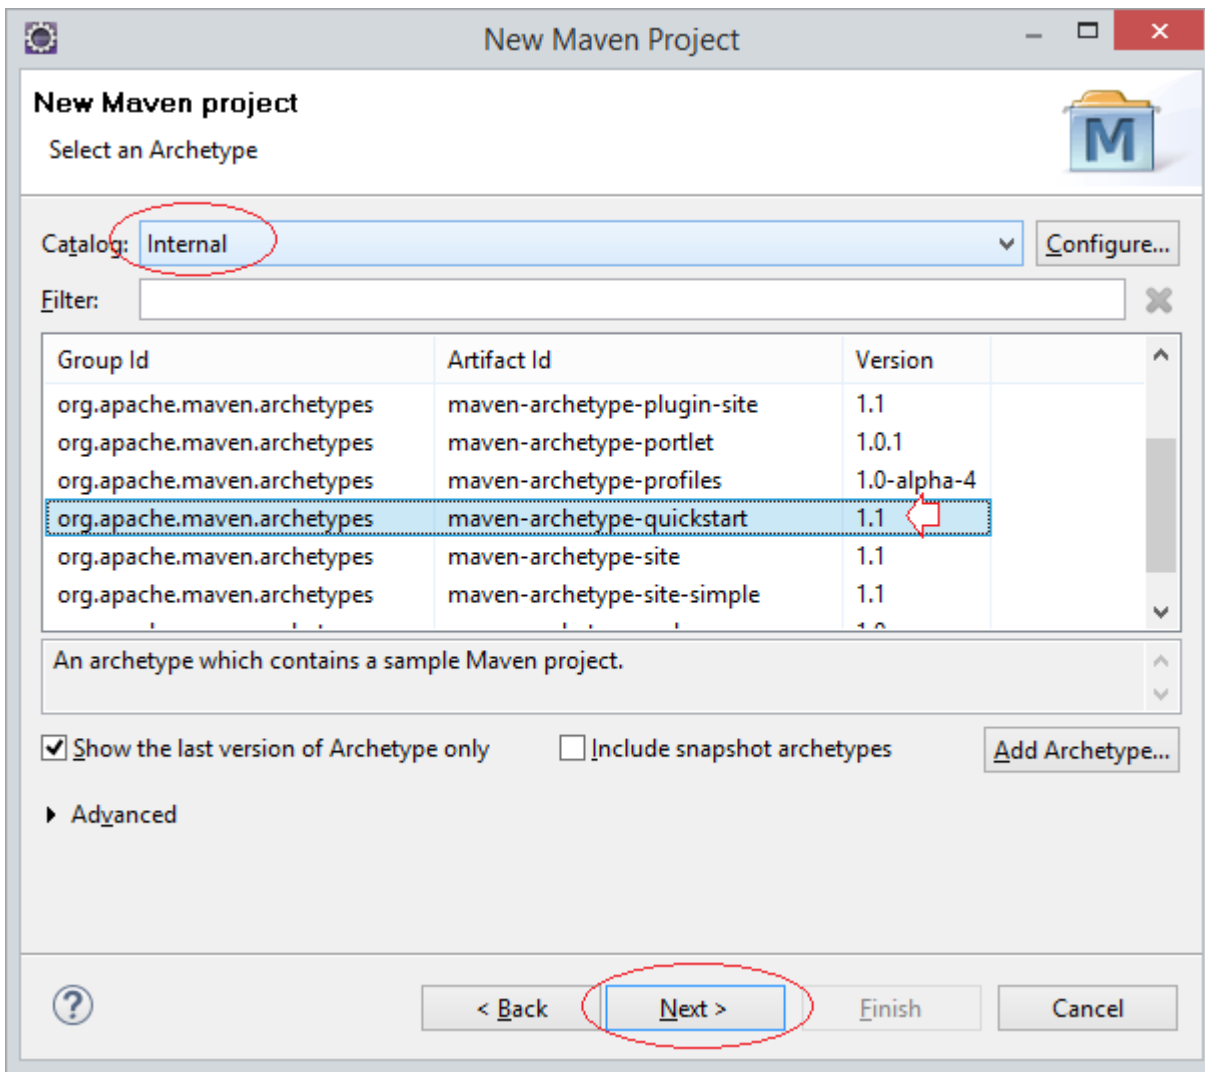

DEPARTMENT				
DEPT_ID [NUMBER(10, 0)]	DEPT_NAME [VARCHAR2(255)]	DEPT_NO [VARCHAR2(20)]	LOCATION [VARCHAR2(255)]	
10	ACCOUNTING	D10	NEW YORK	
20	RESEARCH	D20	DALLAS	
30	SALES	D30	CHICAGO	
40	OPERATIONS	D40	BOSTON	
<new row>				

## 4- Create Project

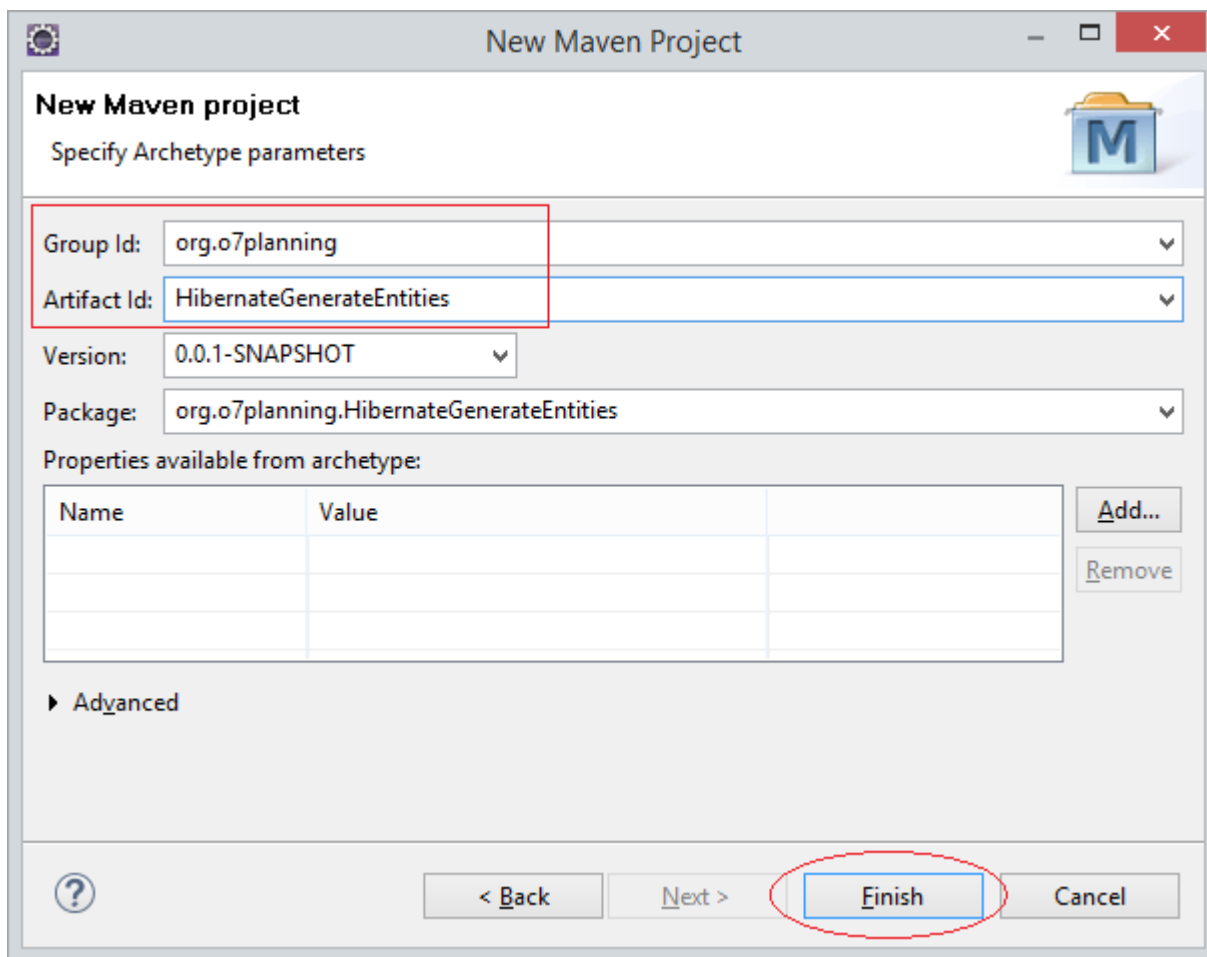

Enter:

- **Group Id:** org.o7planning
- **Artifact Id:** HibernateGenerateEntities

New Maven Project

Specify Archetype parameters

Group Id:

Artifact Id:

Version:

Package:

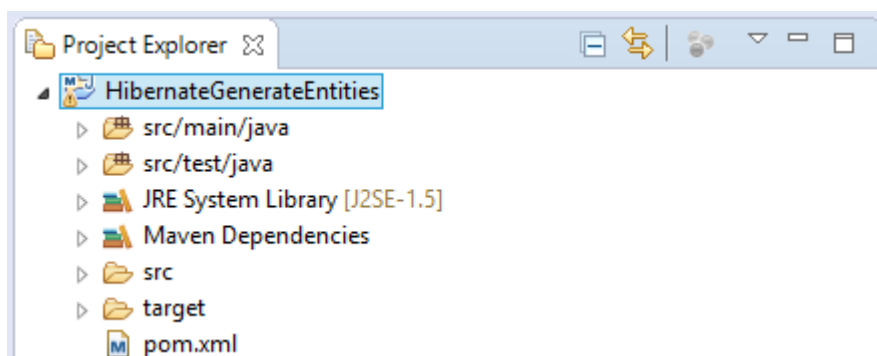

Properties available from archetype:

Name	Value

► Advanced

< Back Next > **Finish** Cancel

Project is created:

Declaring **Hibernate 5** library, and **JDBC Driver** for **Oracle**, **MySQL**, **SQL Server**:

#### pom.xml

```
1 <project xmlns="http://maven.apache.org/POM/4.0.0"
2   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

84 </dependencies>
85
86 </project>
```

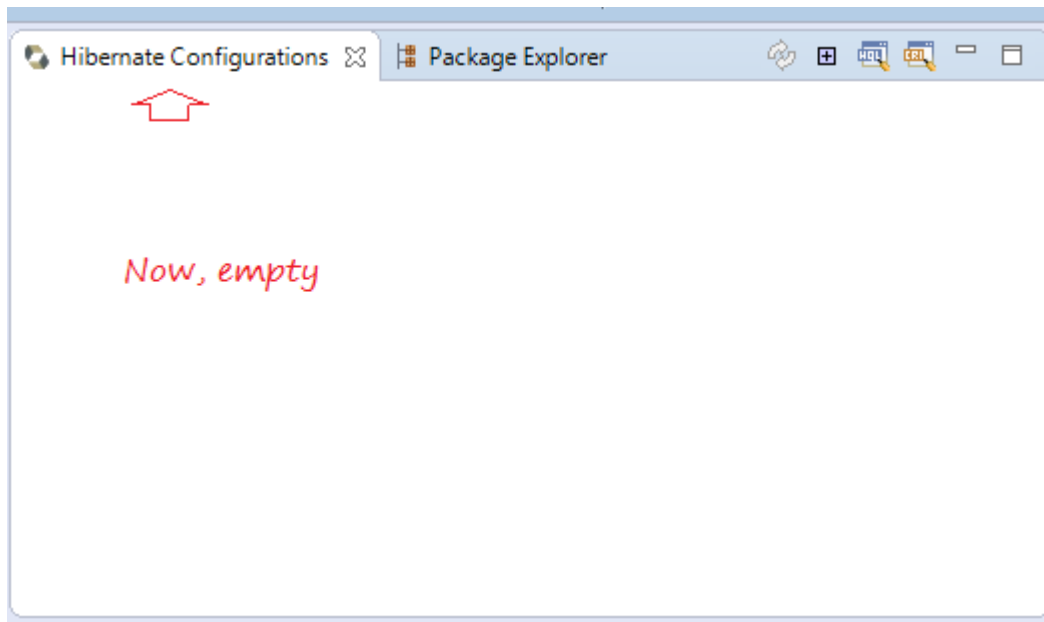

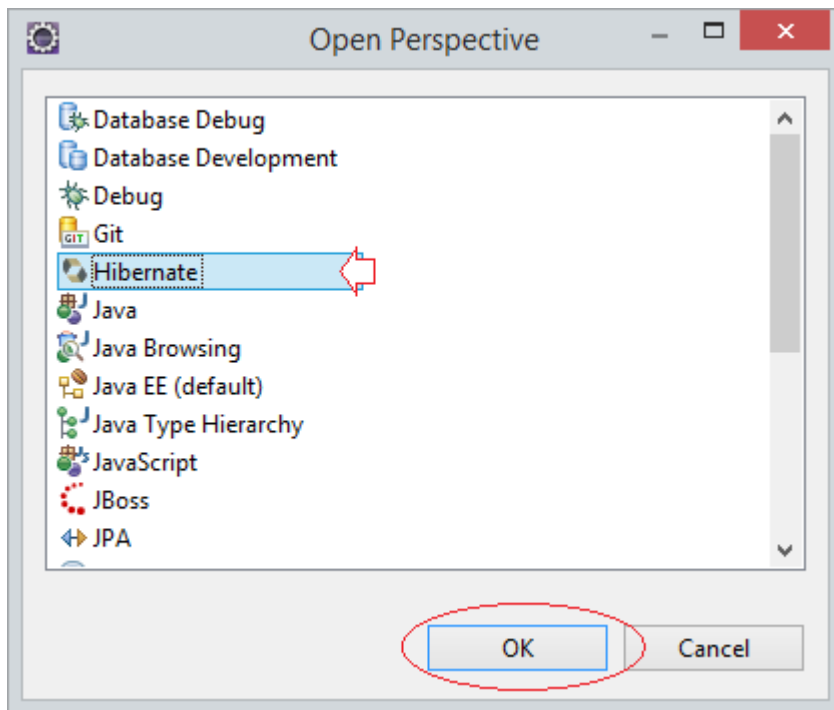

## 5- Configuring Hibenate

"Hibernate Tools" allows create configuration file. And now we will create the file "hibernate.cfg.xml" using this tool.

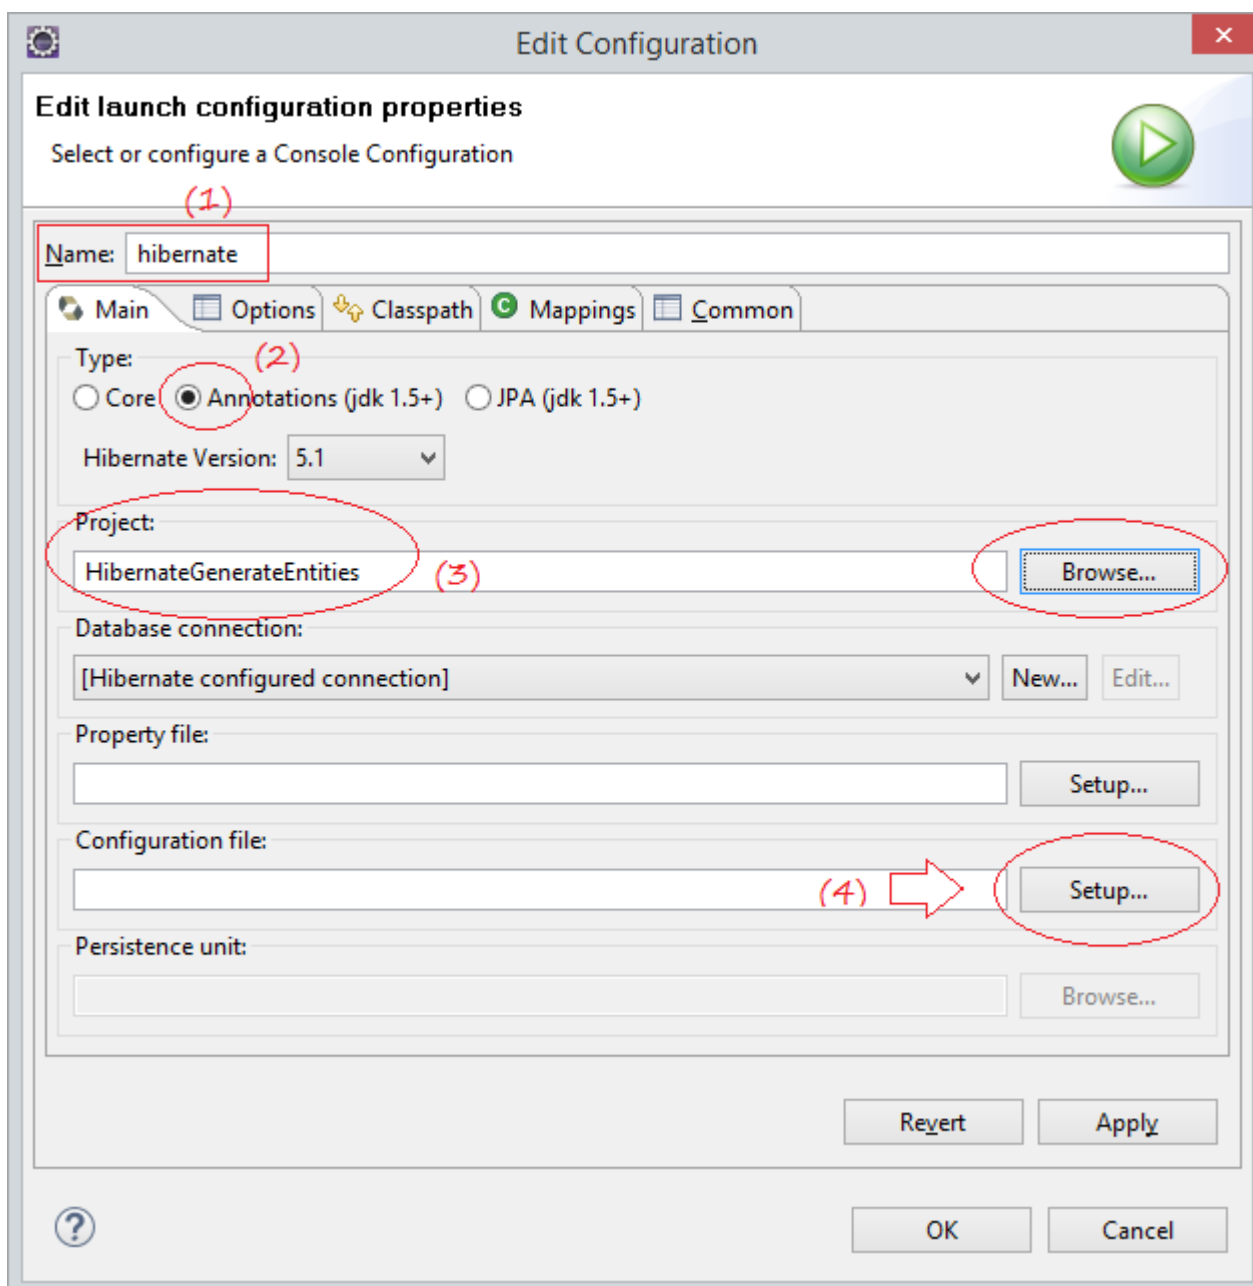

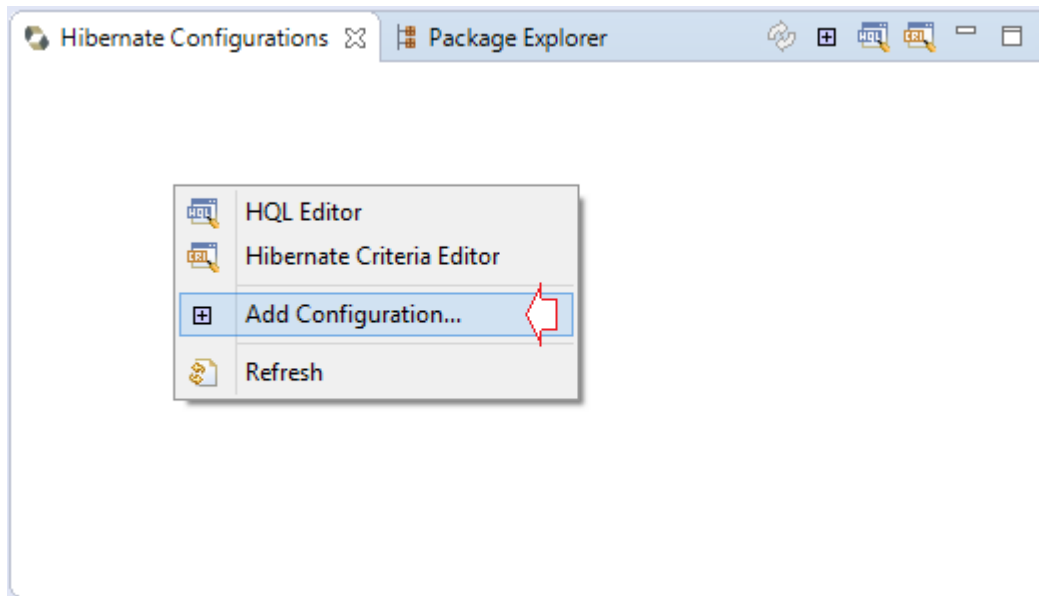

In Eclipse, select:

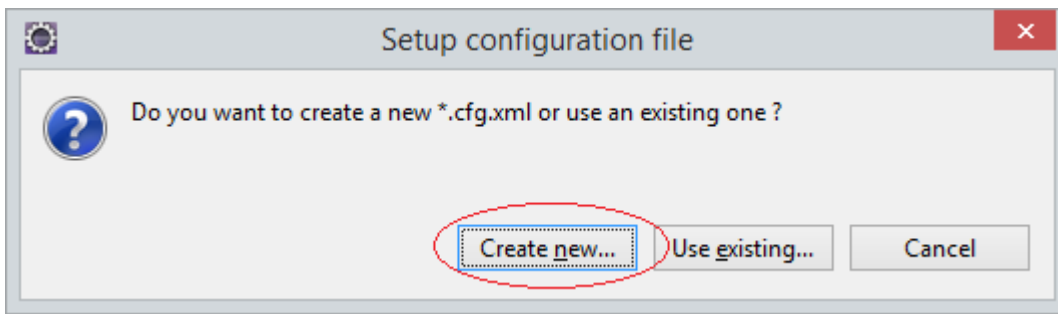

- Window/Perspective/Open Perspective/Other...

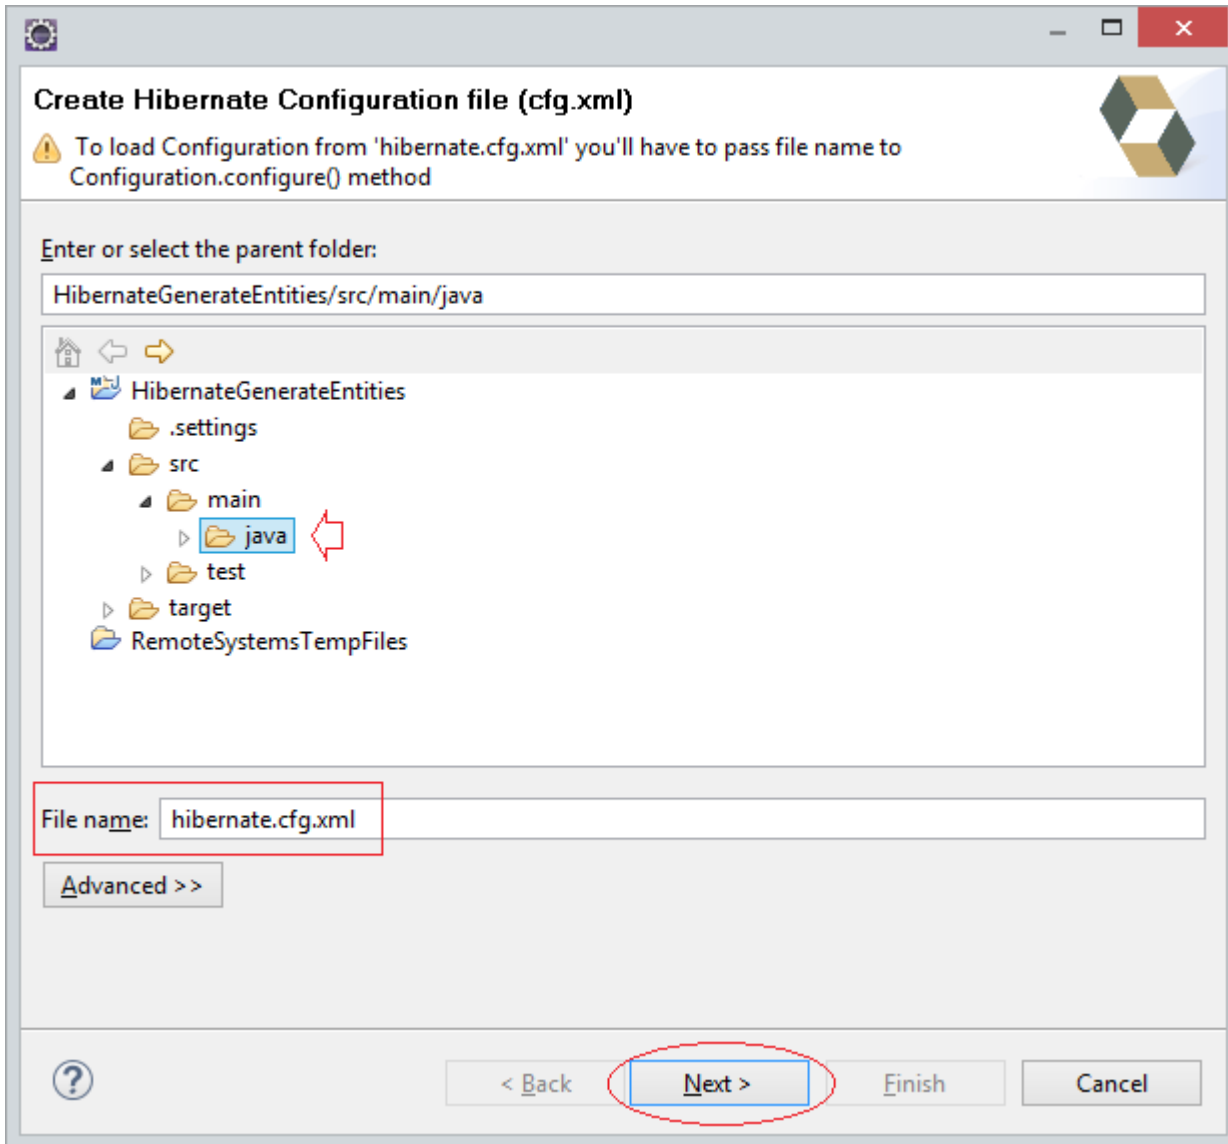

Right-Click, and select *"Add Configuration .."* to create **Hibernate** configuration file.

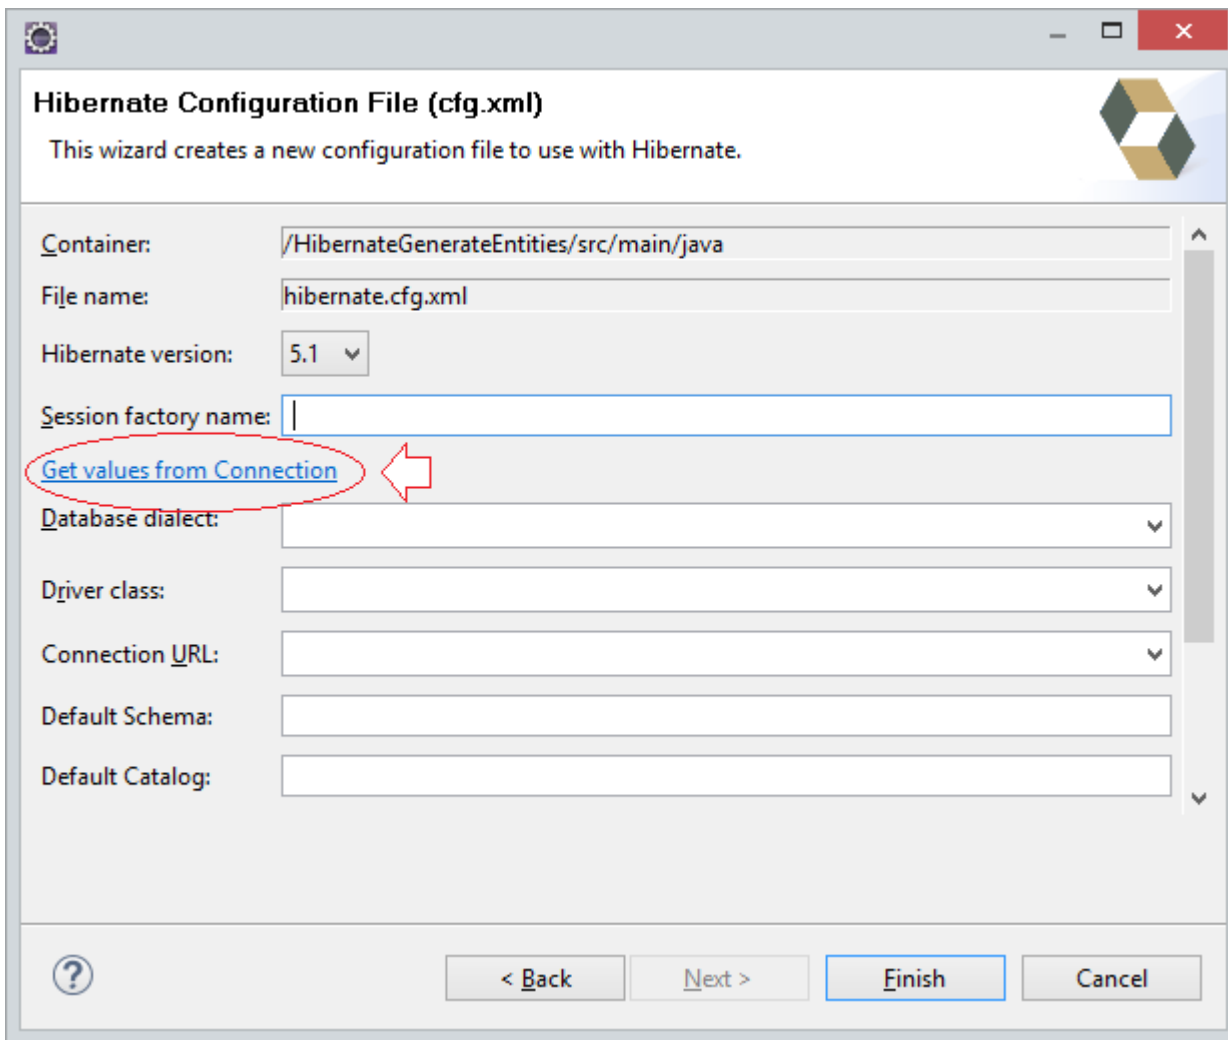

Enter the file name *"hibernate.cfg.xml"*, and put it into the *"src/main/java"* folder of the Project.

You can type the information into a database connection or retrieve the connection information that you have previously declared. Click on *"Get values from Connection"*.

**Hibernate Configuration File (cfg.xml)**

This wizard creates a new configuration file to use with Hibernate.

Container: /HibernateGenerateEntities/src/main/java

File name: hibernate.cfg.xml

Hibernate version: 5.1

Session factory name:

**Get values from Connection**

Database dialect:

Driver class:

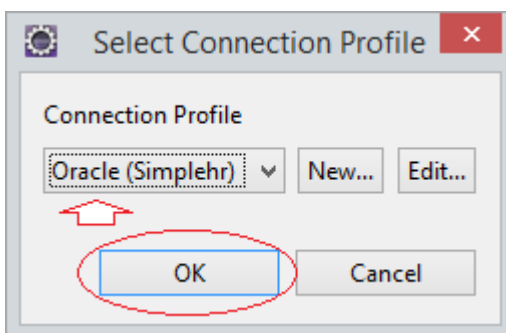

Connection URL:

Default Schema:

Default Catalog:

< Back Next > Finish Cancel

Select Connection "Oracle (Simplehr)", which you have created above. Click OK to continue.

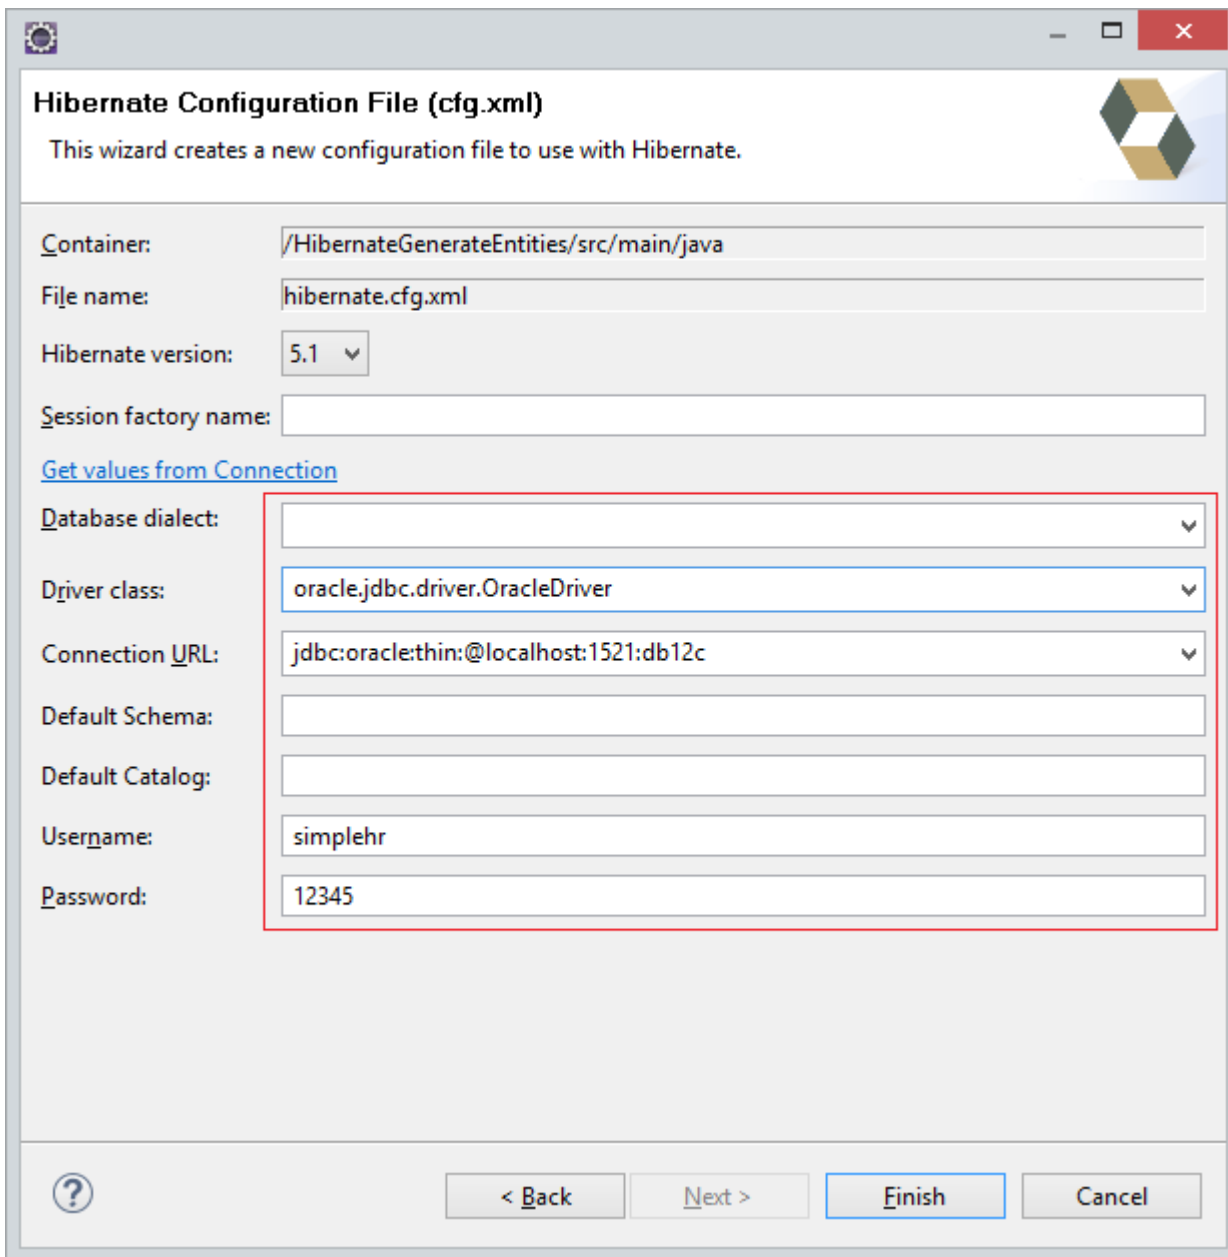

**Select Connection Profile**

Connection Profile

Oracle (Simplehr) New... Edit...

**OK** Cancel

**Hibernate Configuration File (cfg.xml)**

This wizard creates a new configuration file to use with Hibernate.

Container: /HibernateGenerateEntities/src/main/java

File name: hibernate.cfg.xml

Hibernate version: 5.1

Session factory name:

[Get values from Connection](#)

Database dialect:

Driver class: oracle.jdbc.driver.OracleDriver

Connection URL: jdbc:oracle:thin:@localhost:1521:db12c

Default Schema:

Default Catalog:

Username: simplehr

Password: 12345

[?](#) < Back Next > Finish Cancel

Next select the class "dialect" that corresponds to your database type. With Oracle is Oracle10g, attention dialect class "Oracle10g" is used for both versions 10 and 11 of Oracle.

**Hibernate Configuration File (cfg.xml)**

This wizard creates a new configuration file to use with Hibernate.

Container: /HibernateGenerateEntities/src/main/java

File name: hibernate.cfg.xml

Hibernate version: 5.1

Session factory name:

[Get values from Connection](#)

Database dialect: Oracle 10g

Driver class: oracle.jdbc.driver.OracleDriver

Connection URL: jdbc:oracle:thin:@localhost:1521:db12c

Default Schema:

Default Catalog:

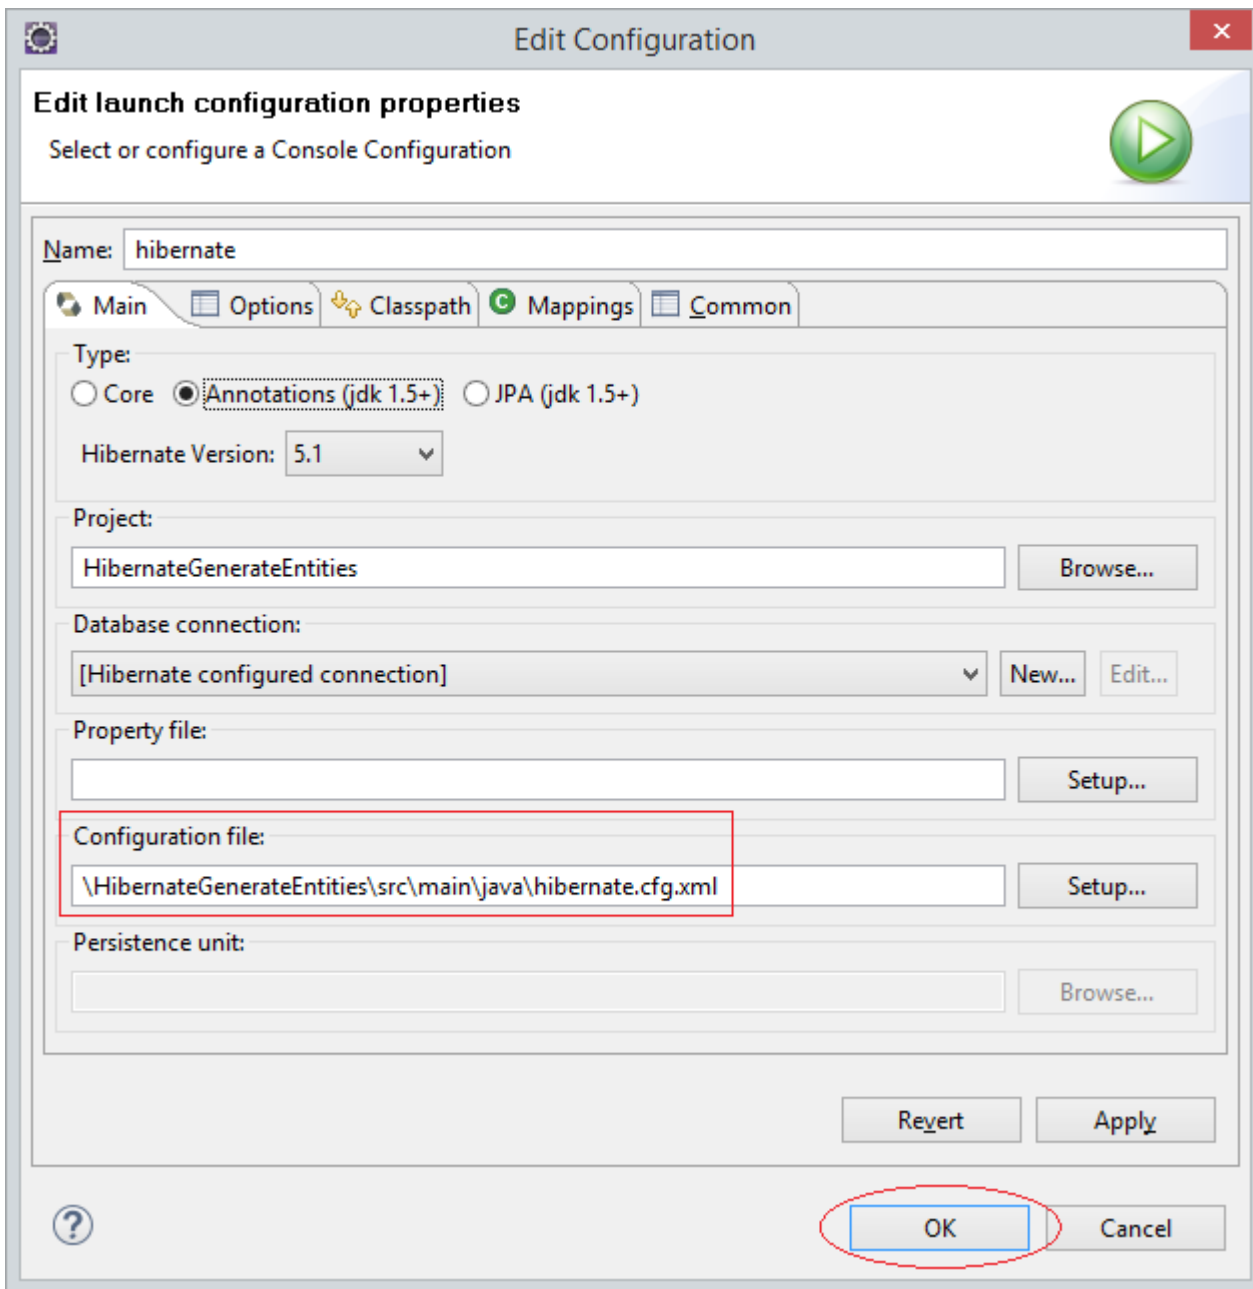

Username: simplehr

Password: 12345

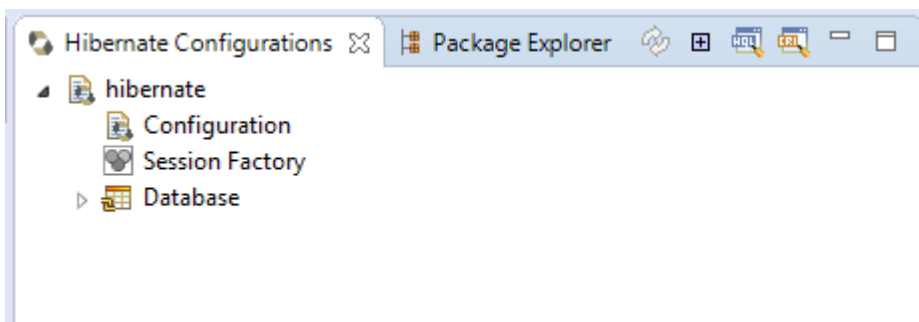

? < Back Next > Finish Cancel

Click OK to complete the configuration. After this step will file *"hibernate.cfg.xml"* was created in the *src/main/java* folder of your Project.

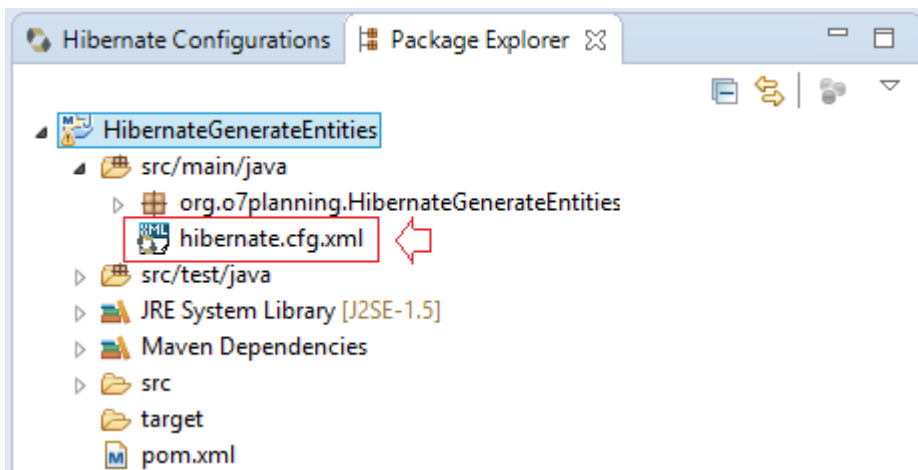

Hibernate Configuration is created. (See in **Hibernate Configurations view**)

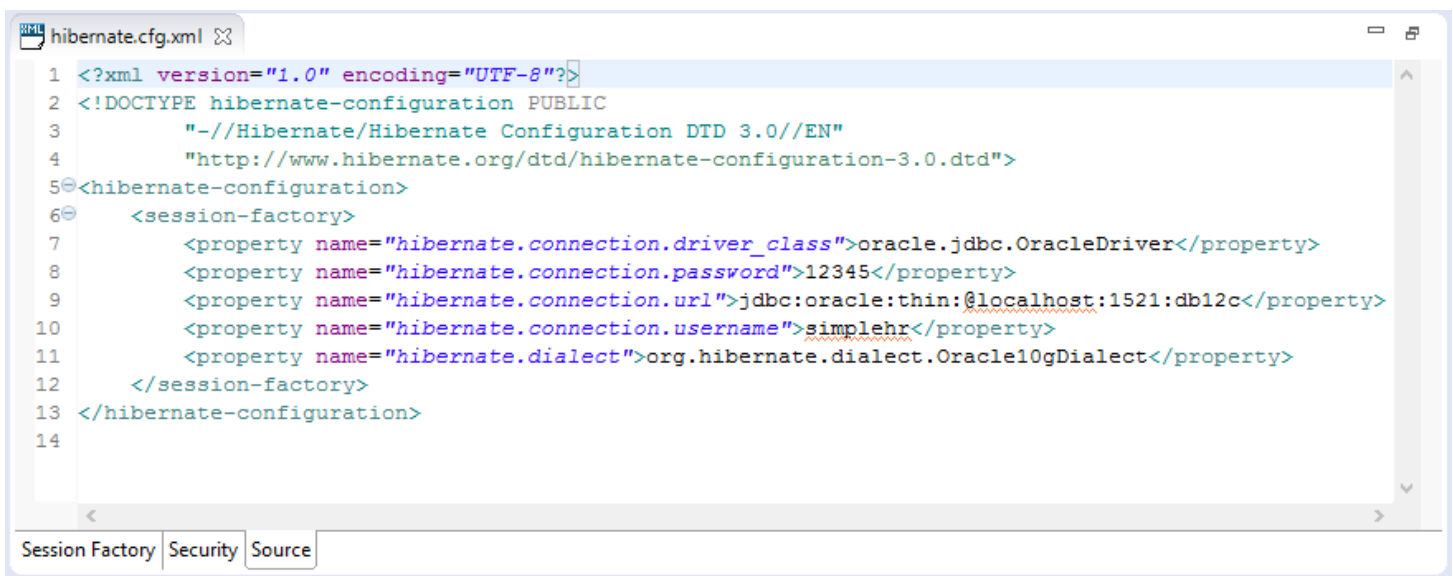

See in "Package Explorer":

- *hibernate.cfg.xml*

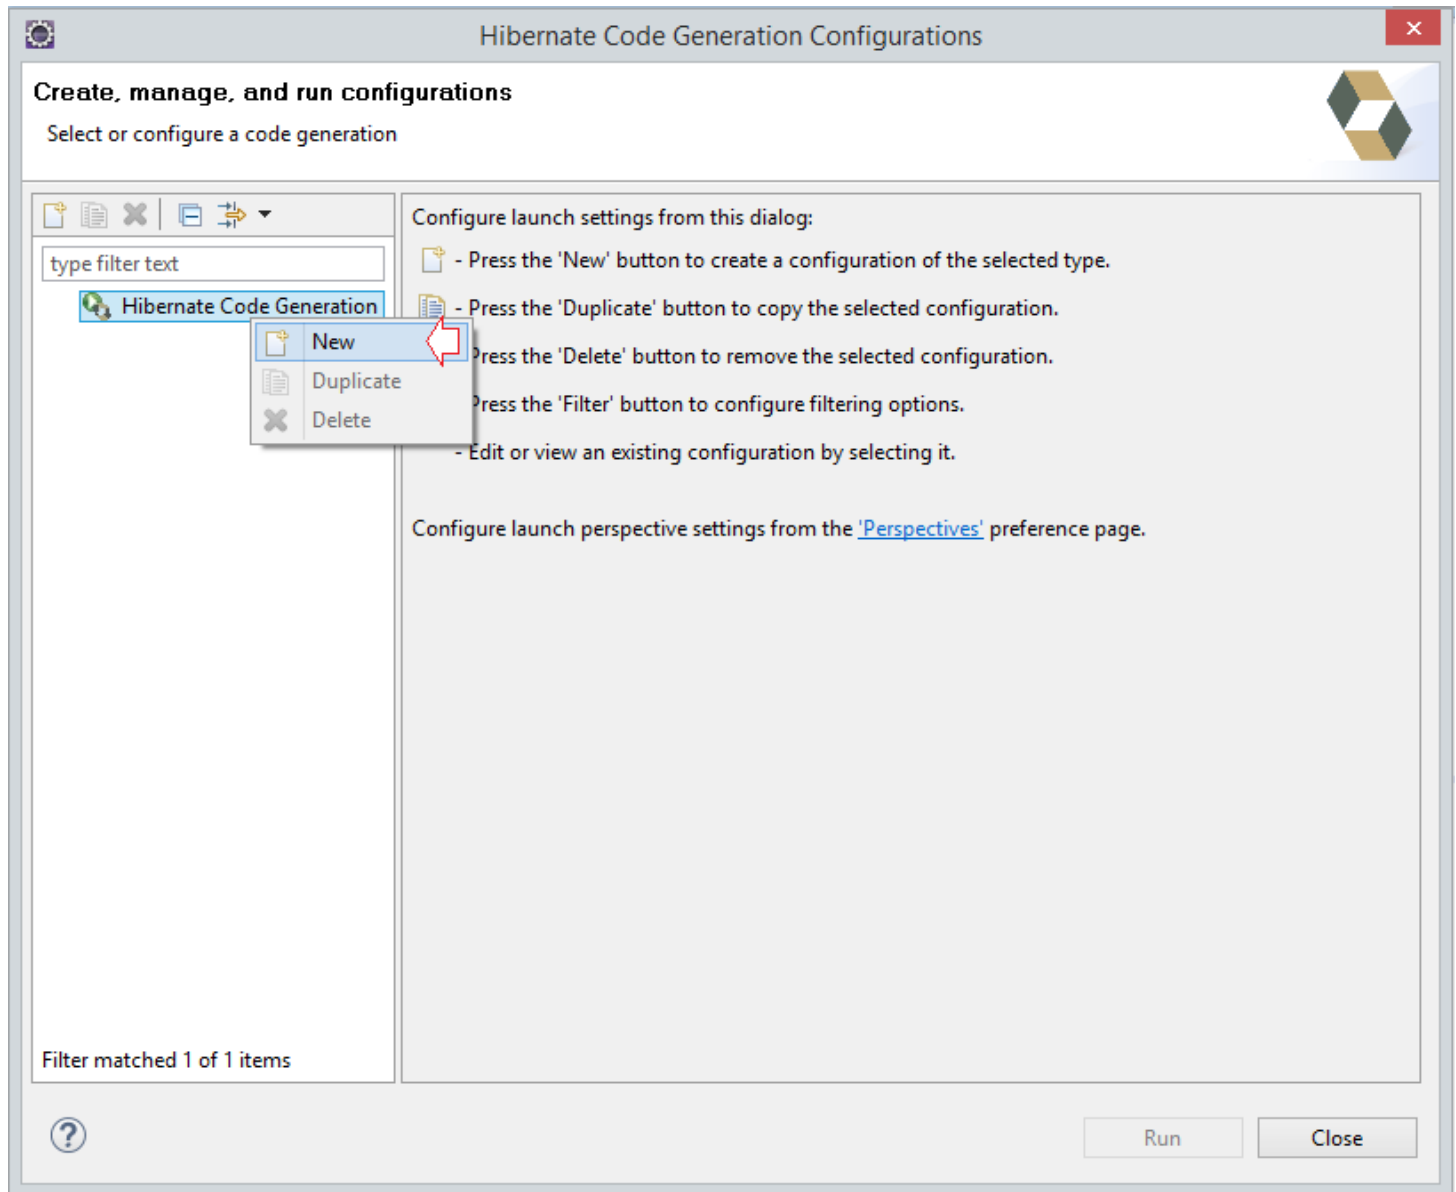

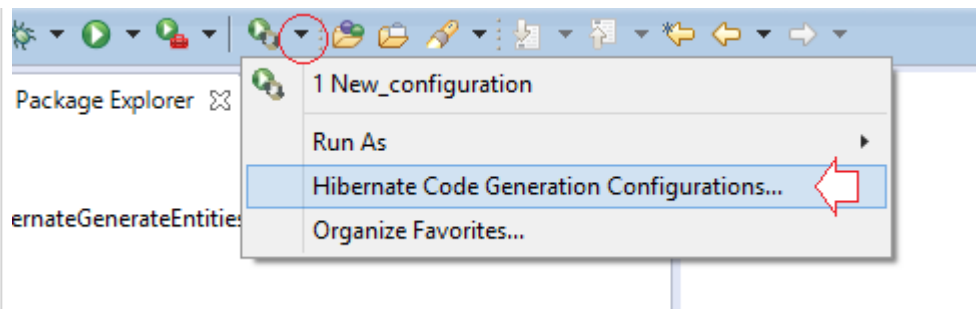

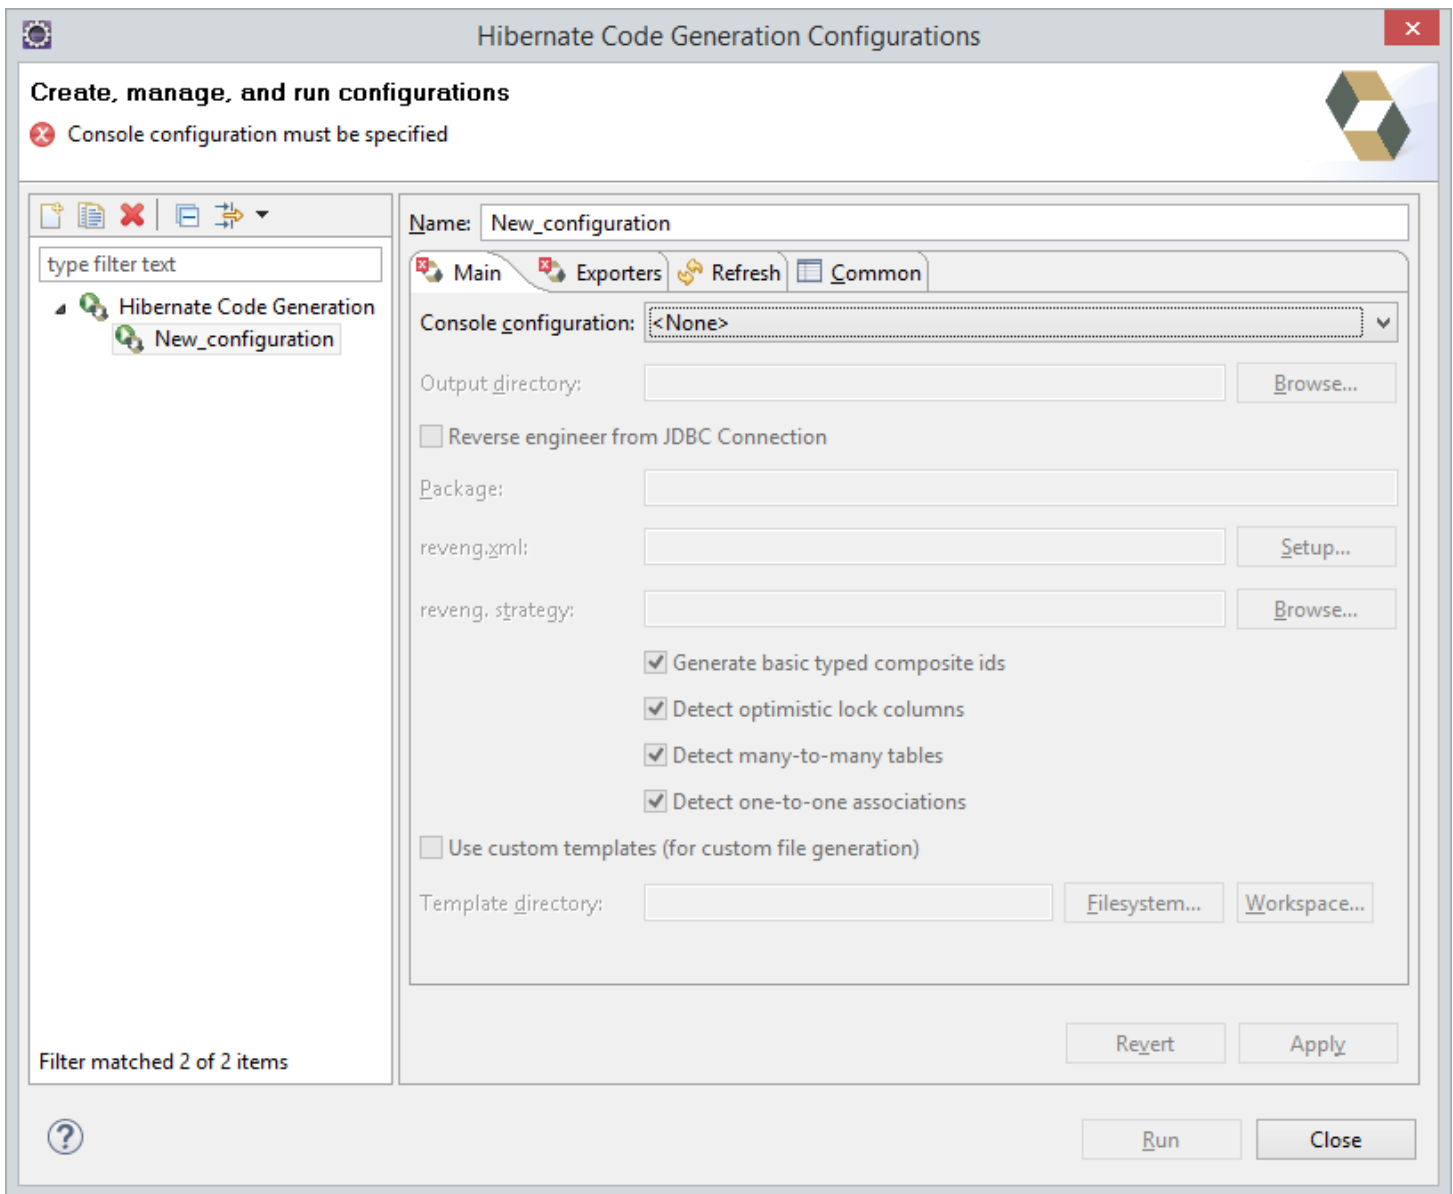

### hibernate.cfg.xml

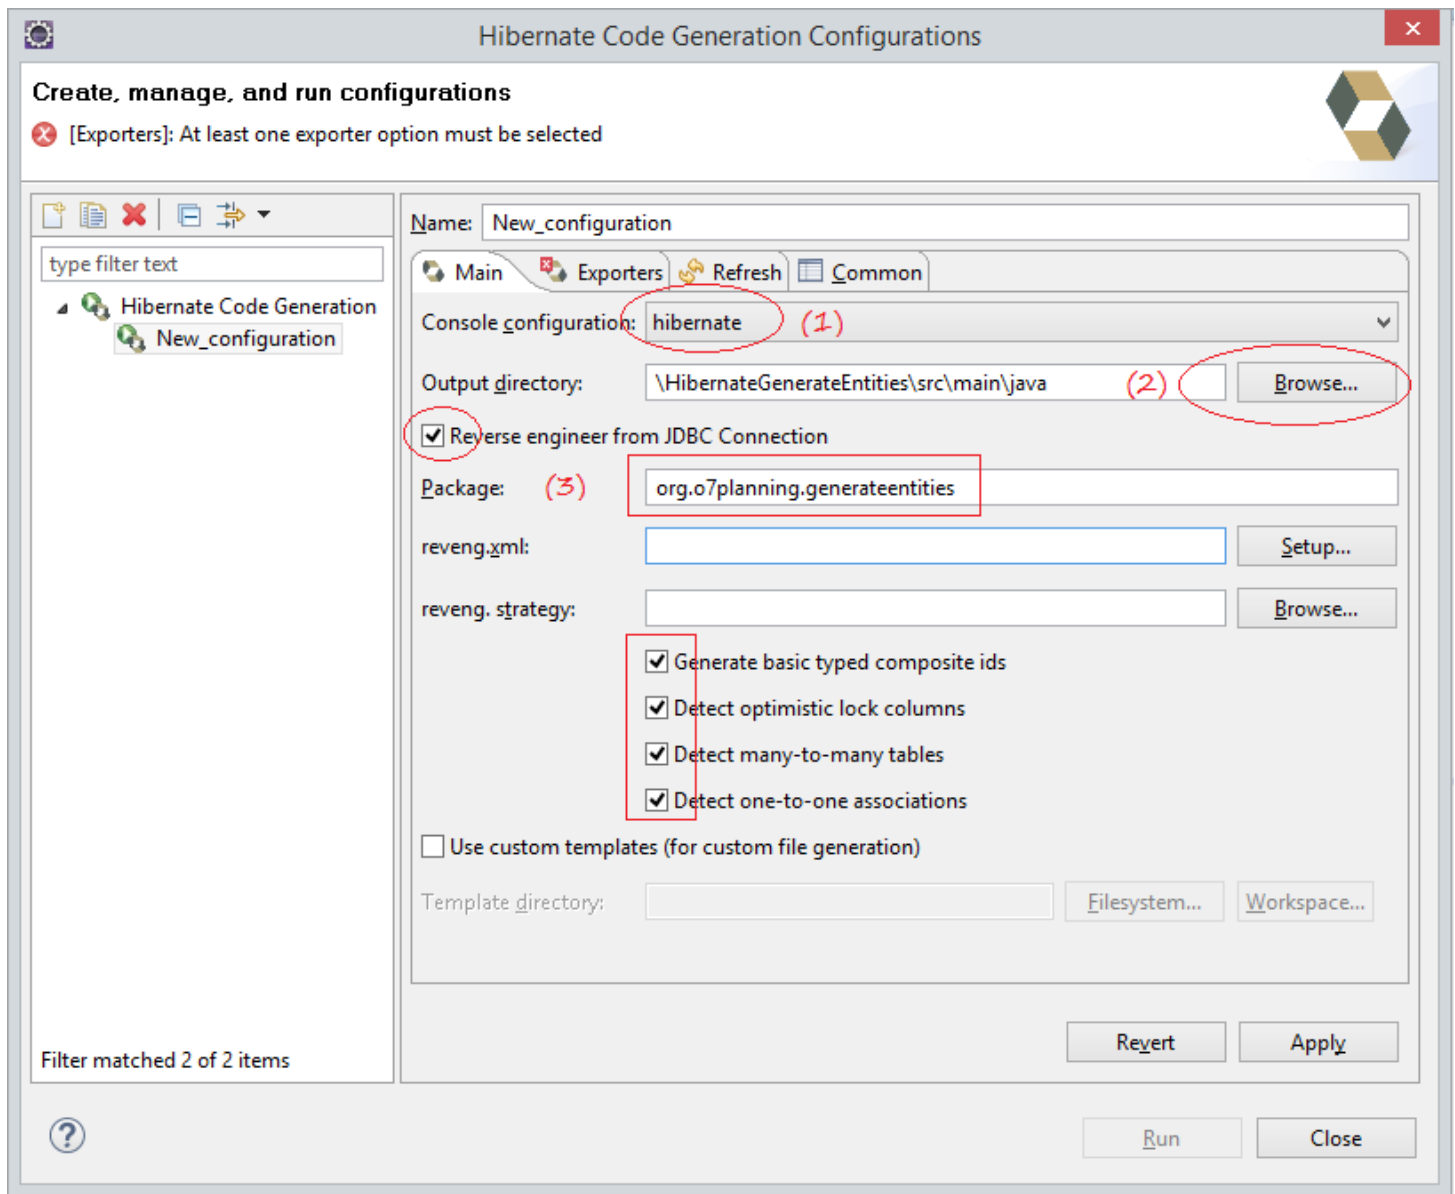

```
1 <?xml version="1.0" encoding="UTF-8"?>
2 <!DOCTYPE hibernate-configuration PUBLIC
3     "-//Hibernate/Hibernate Configuration DTD 3.0//EN"
4     "http://www.hibernate.org/dtd/hibernate-configuration-3.0.dtd">
5 <hibernate-configuration>
6     <session-factory>
7         <property name="hibernate.connection.driver_class">oracle.jdbc.OracleDriver</property>
8         <property name="hibernate.connection.password">12345</property>
9         <property name="hibernate.connection.url">jdbc:oracle:thin:@localhost:1521:db12c</property>
10        <property name="hibernate.connection.username">simplehr</property>
11        <property name="hibernate.dialect">org.hibernate.dialect.Oracle10gDialect</property>
12    </session-factory>
13 </hibernate-configuration>
```

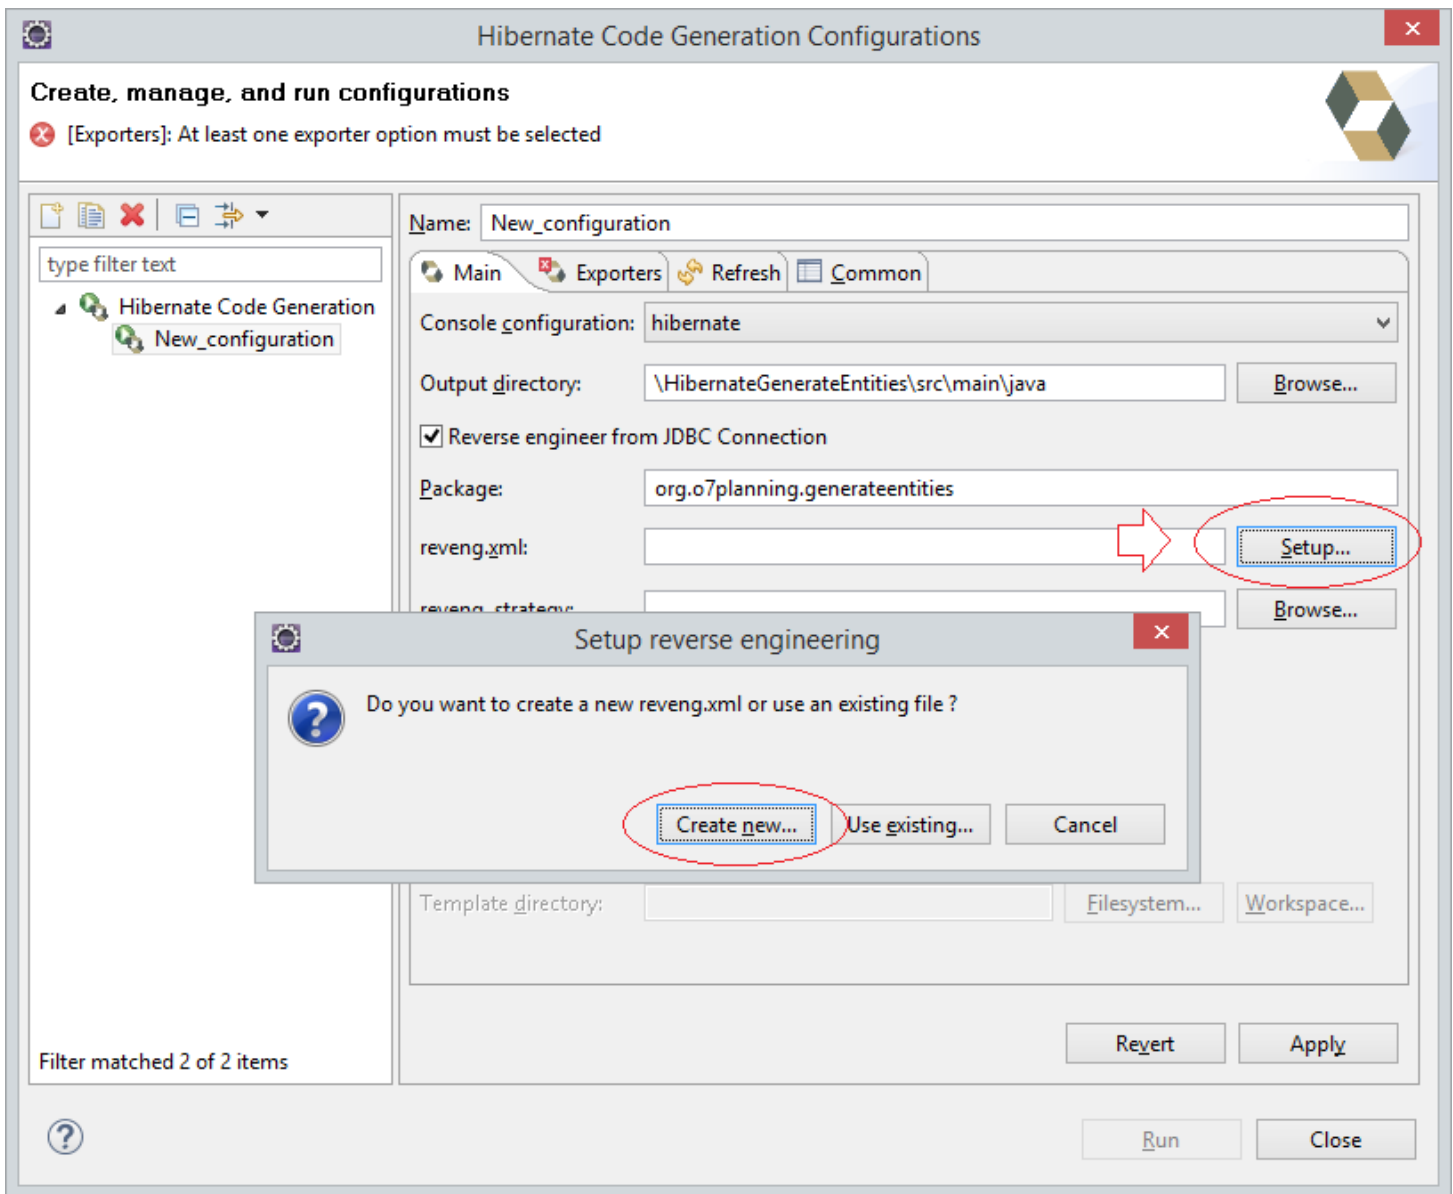

Next we will configure, how to read the table structure and generate to the **entity** class

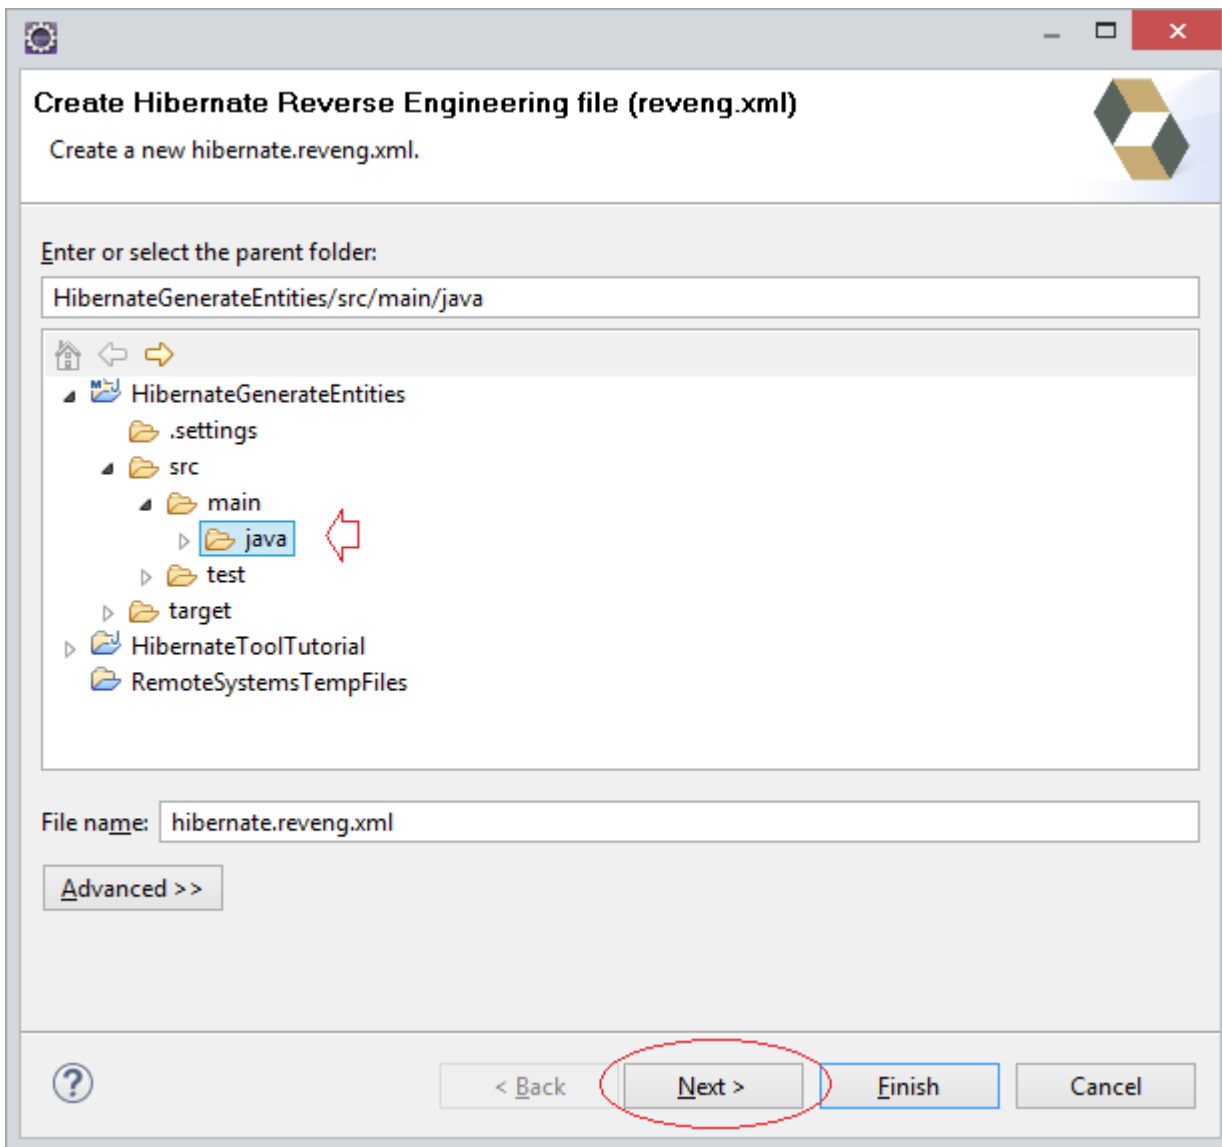

- Window/Perspective/Open Perspective/Hibernate

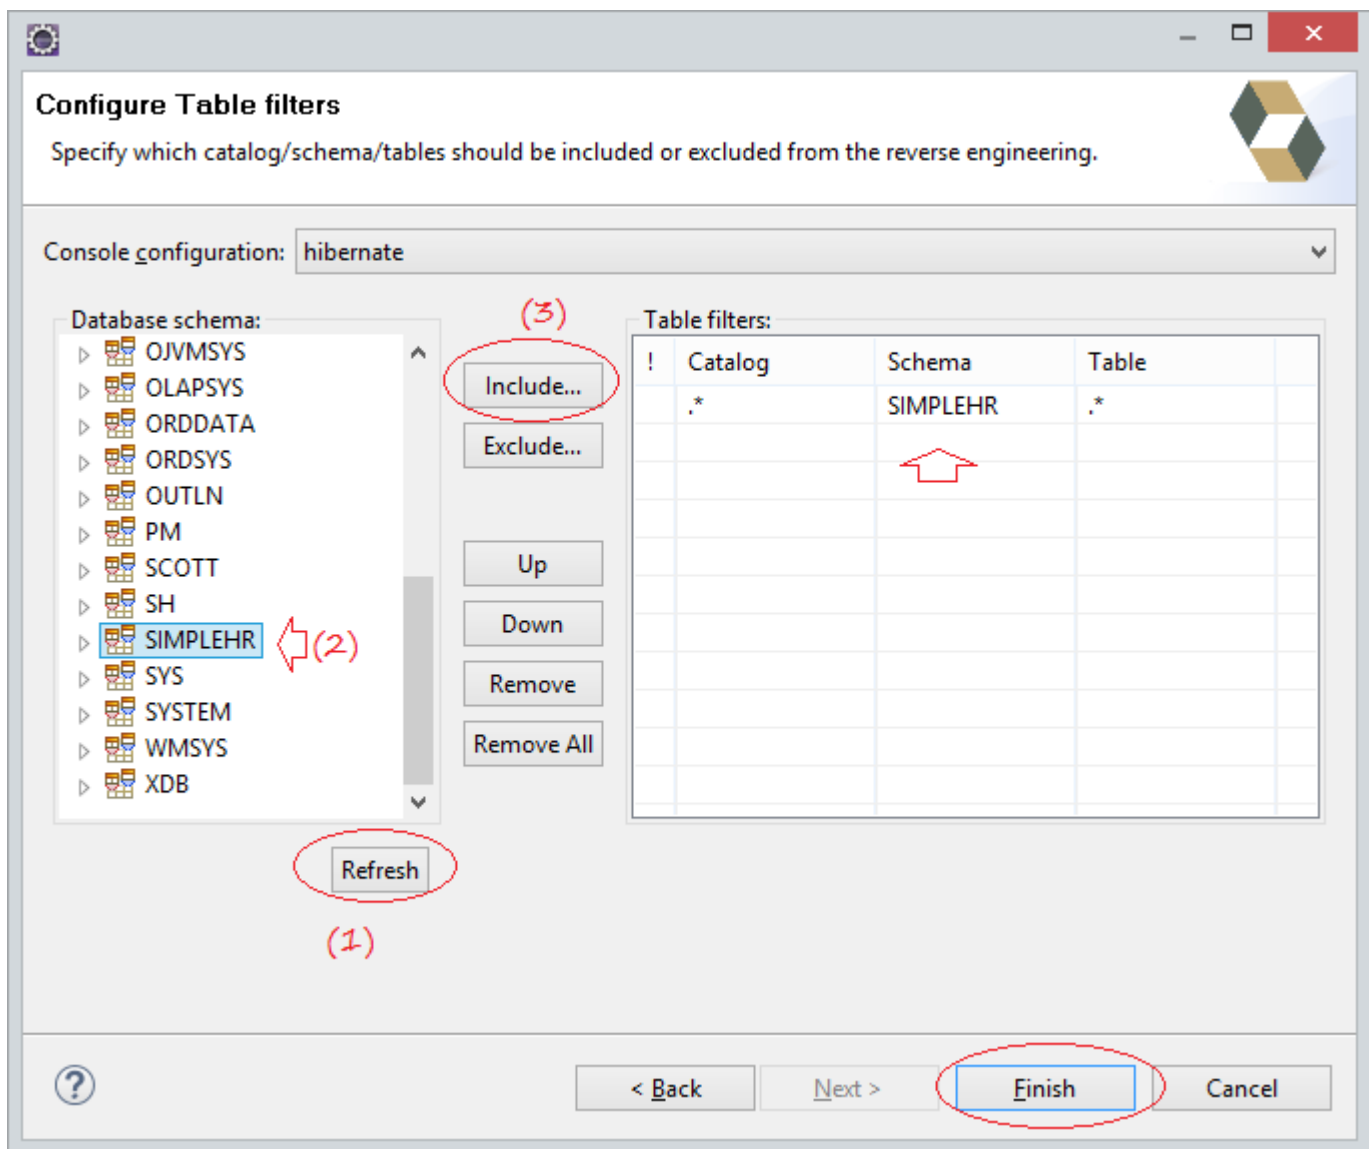

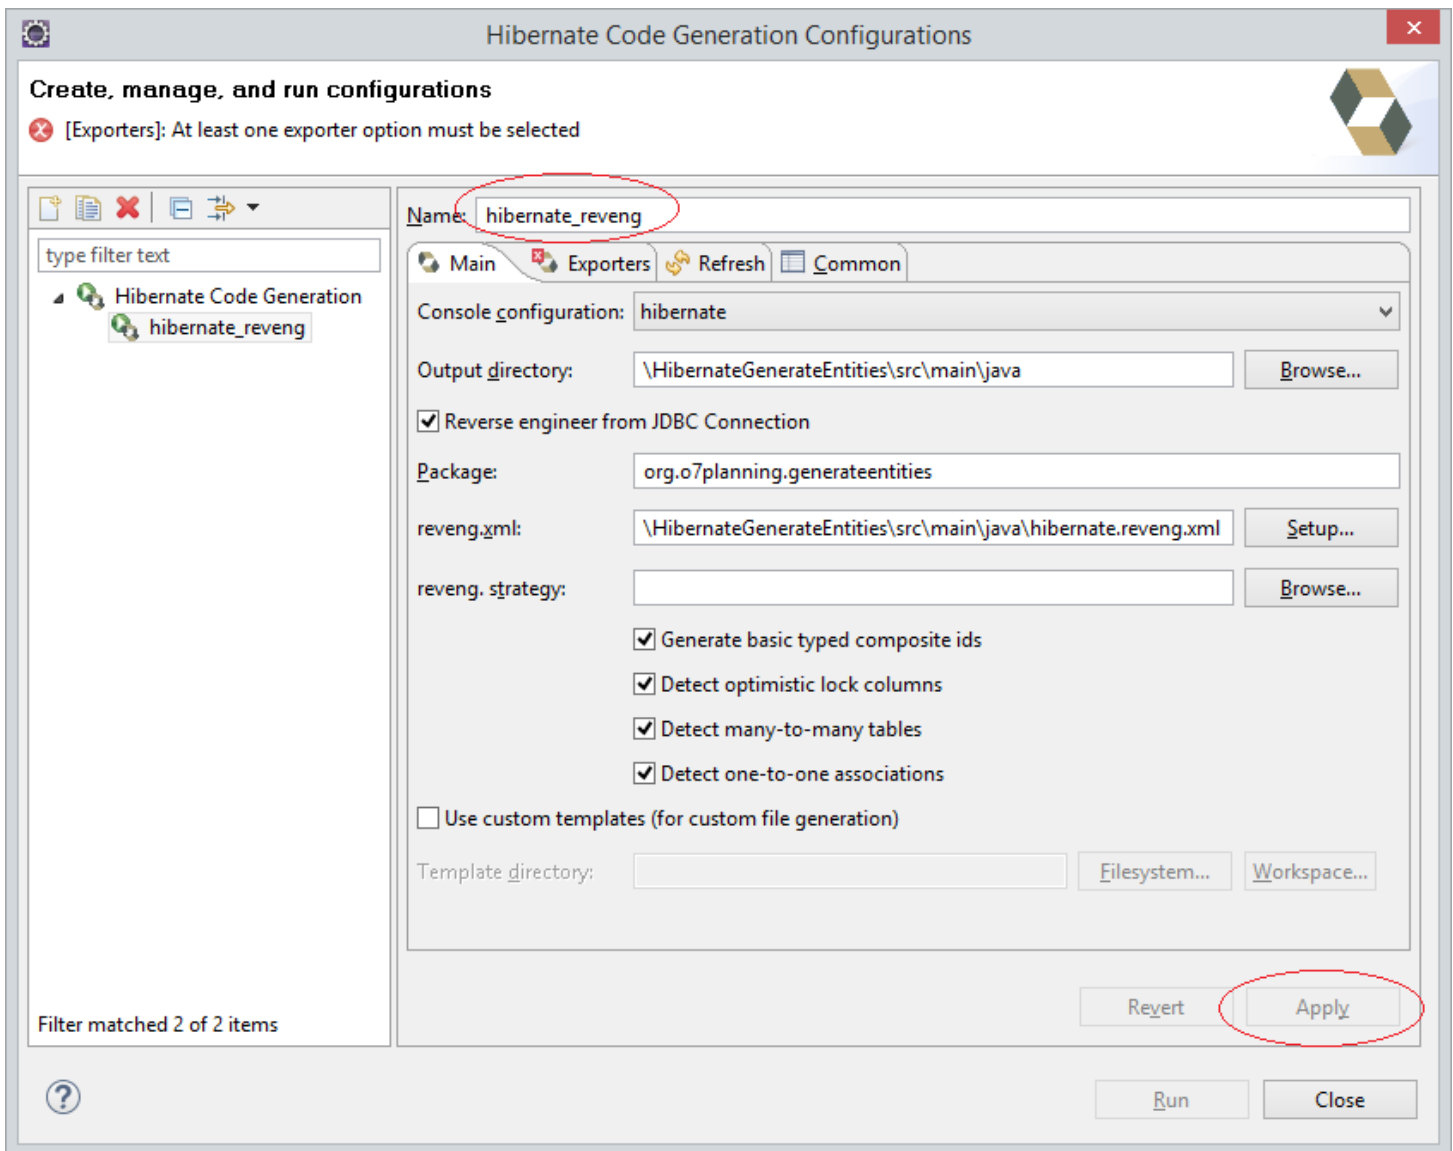

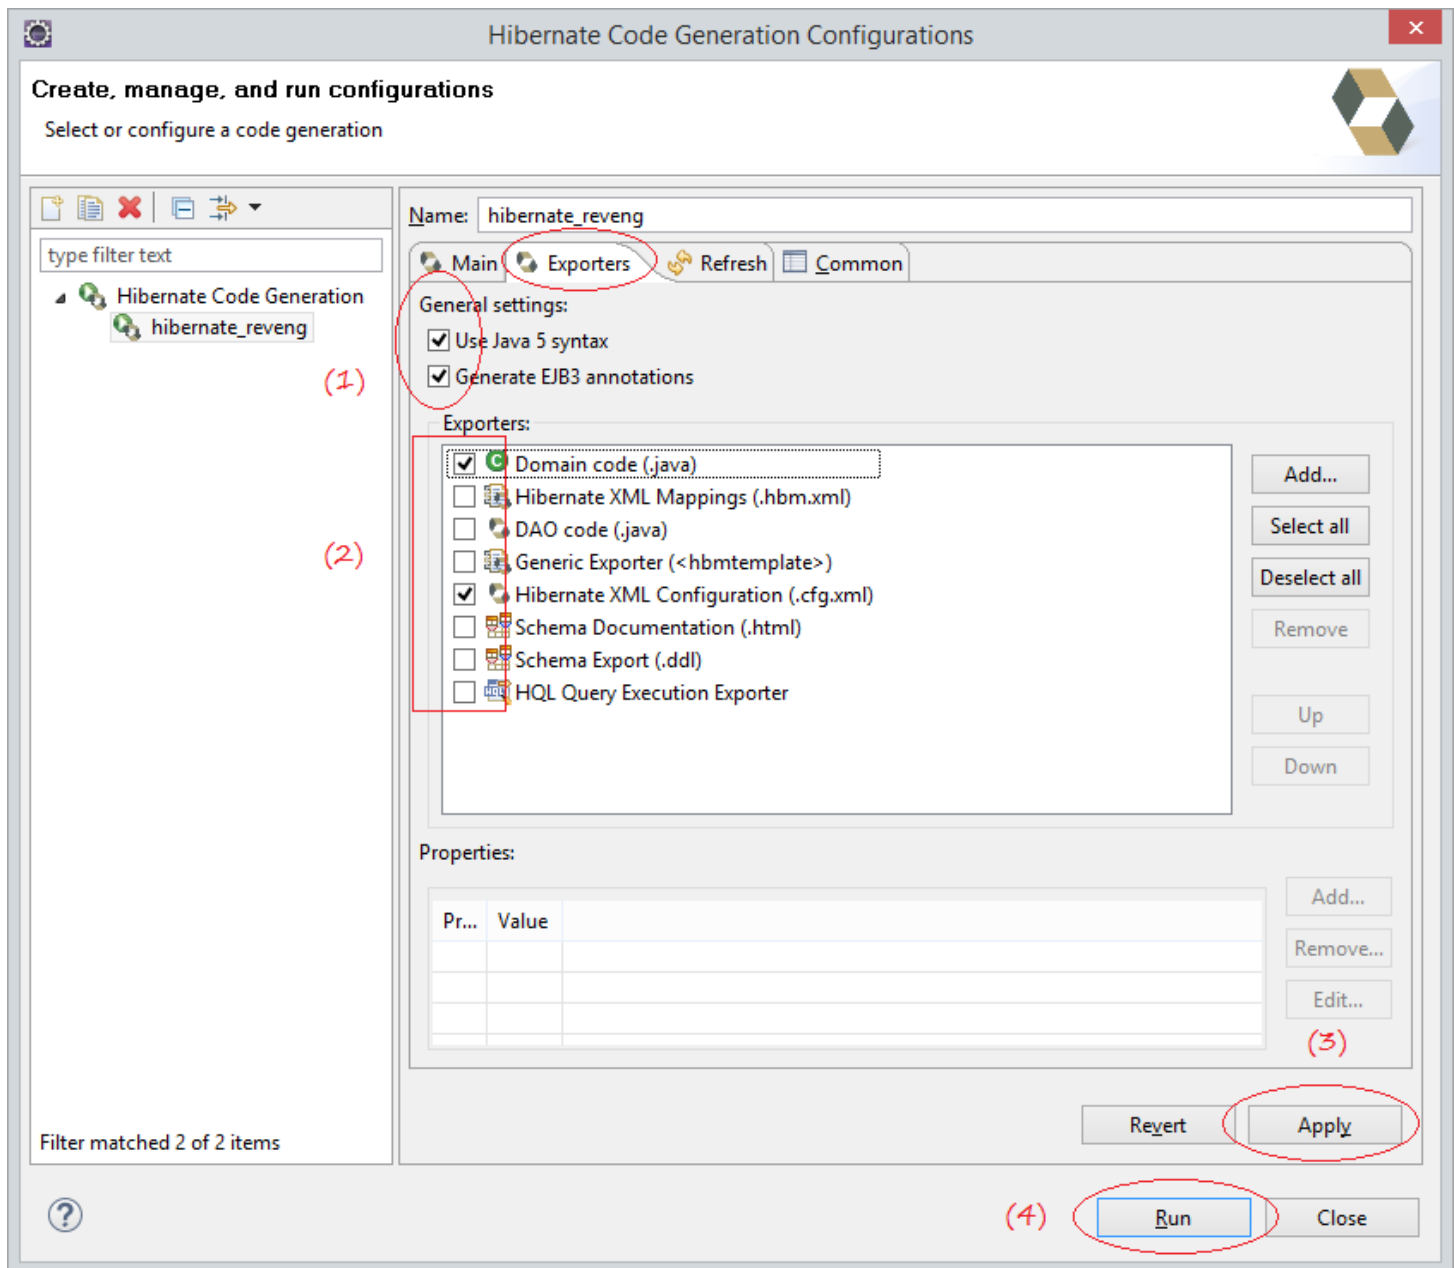

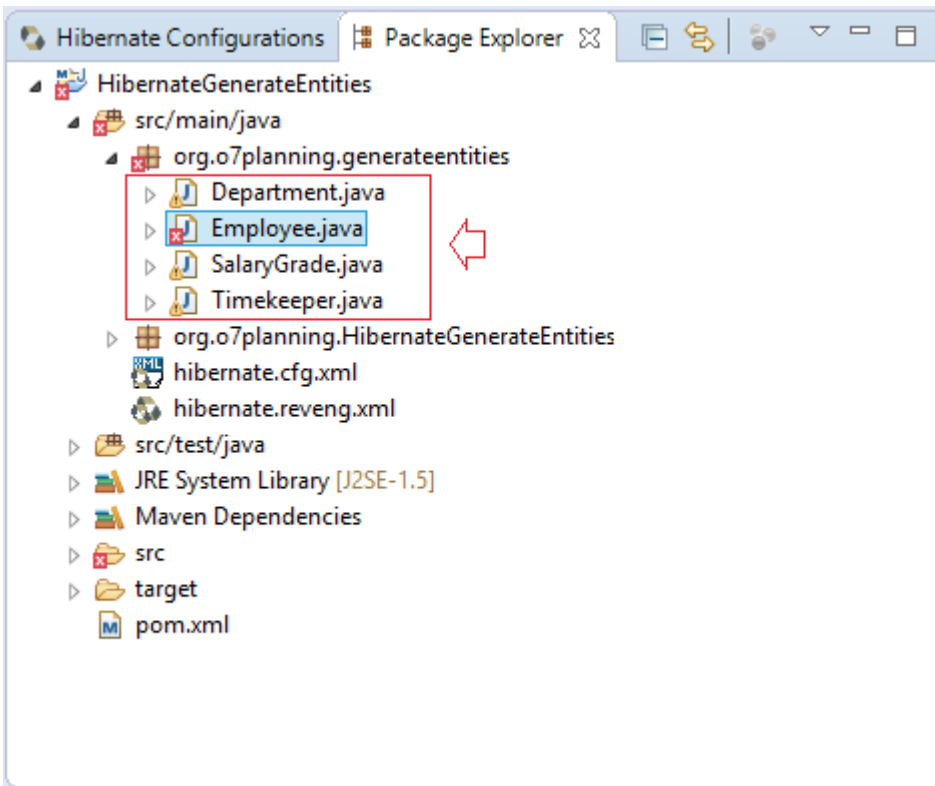

“

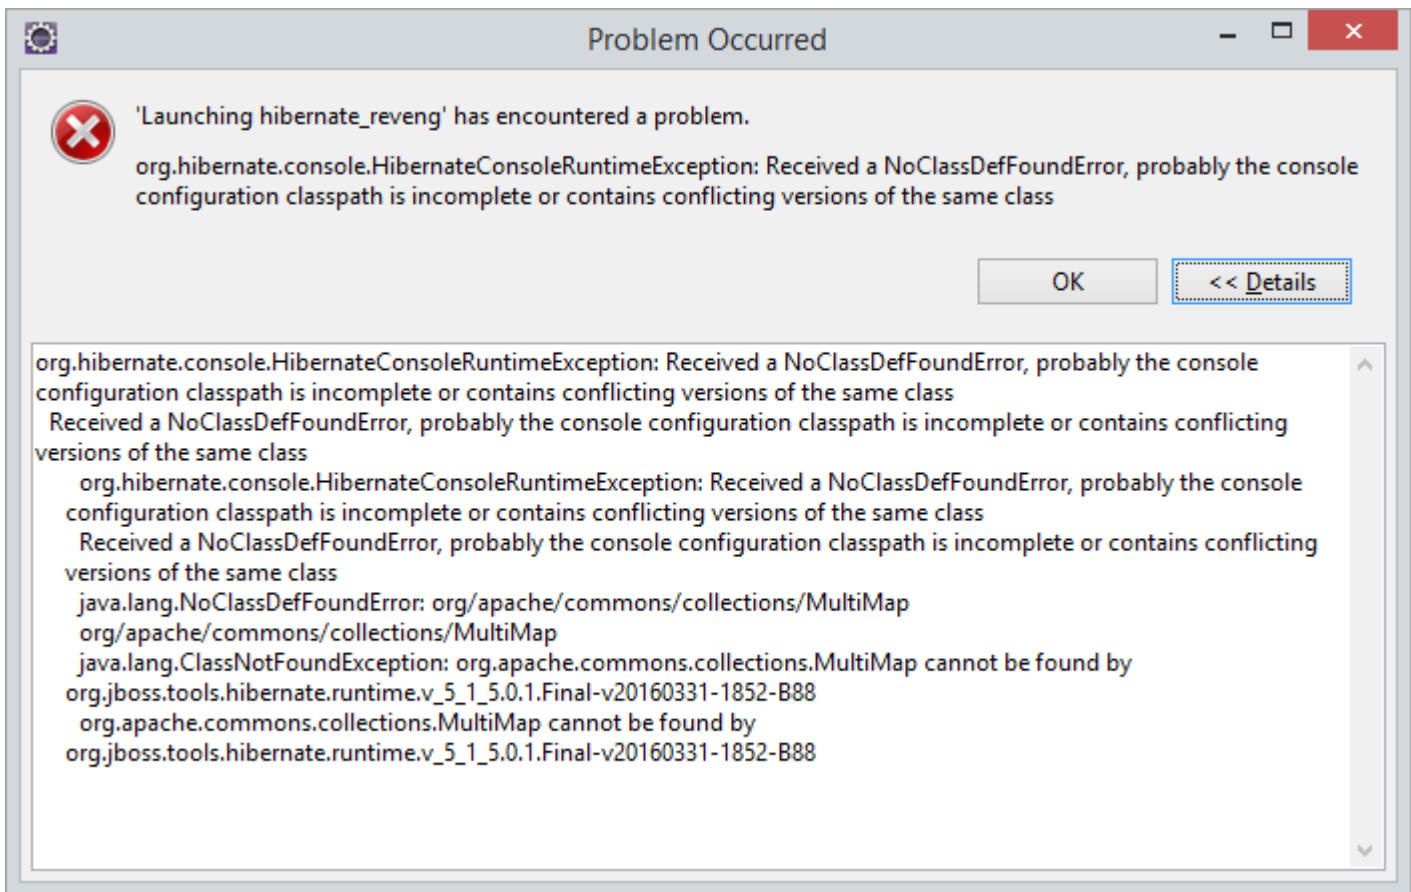

Note: If the process of generating the **entities** fails, you can see how to solve in the appendix.

## 6- Appendix: Error while generating the entities

Maybe when generating the **entities** you get an error as follows:

### **\*\* NoClassDefFoundError \*\***

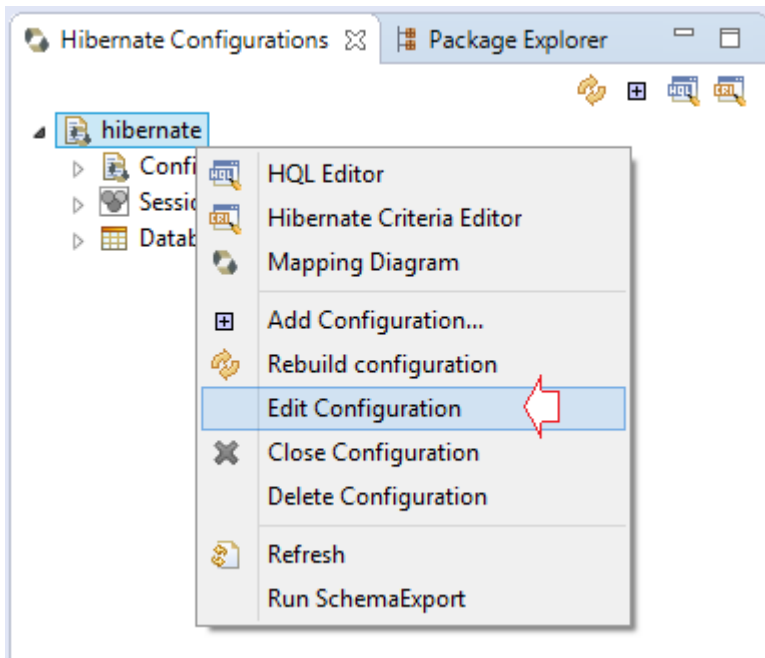

```

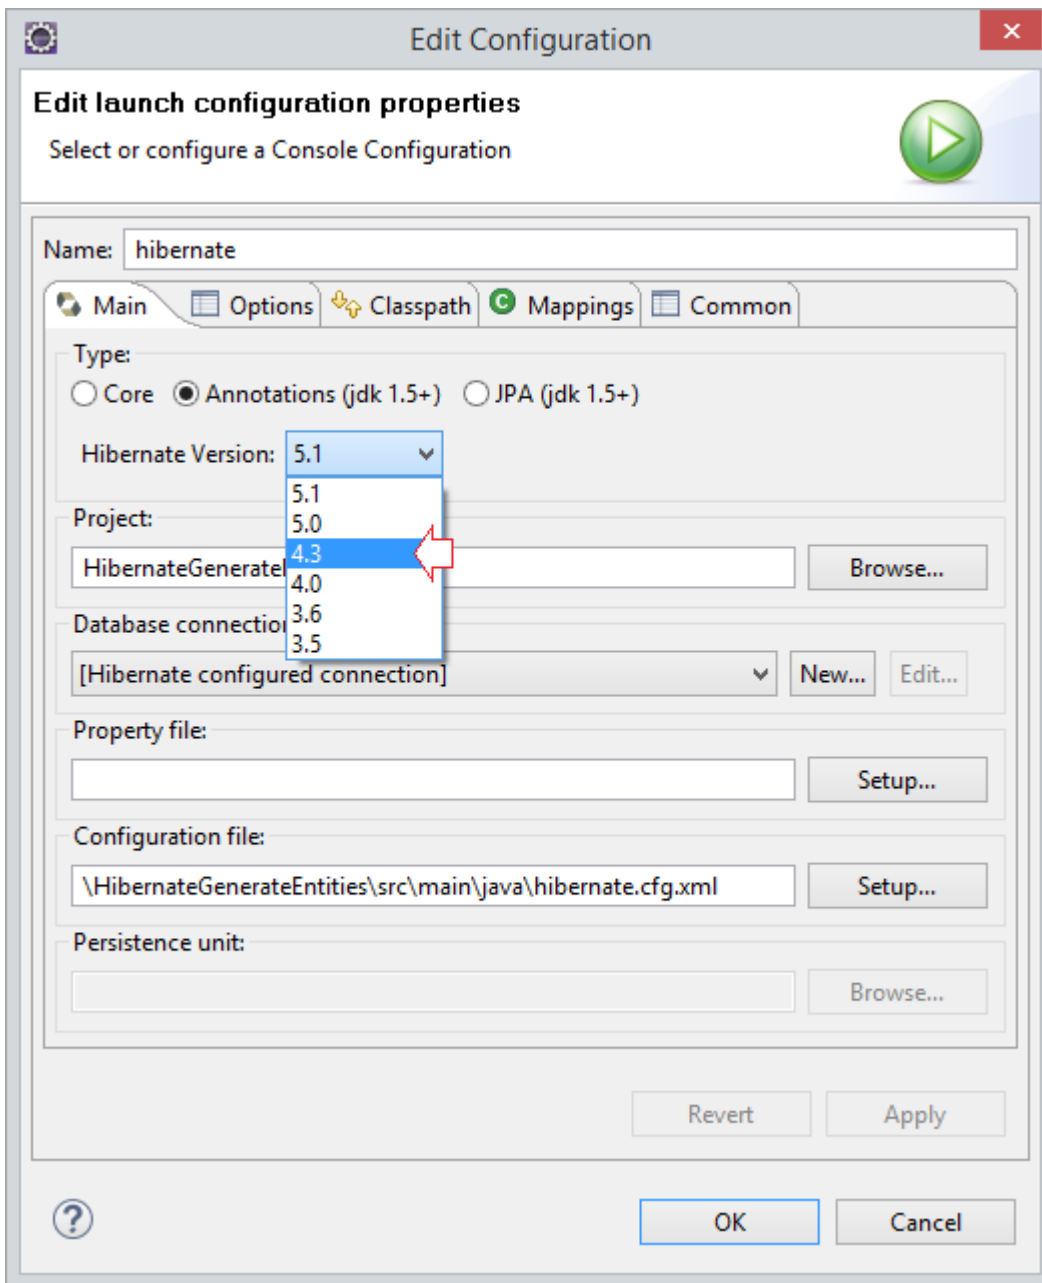

1 org.hibernate.console.HibernateConsoleRuntimeException: Received a NoClassDefFoundError,
2 probably the console configuration classpath is incomplete or contains conflicting versions of the same class
3 Received a NoClassDefFoundError, probably the console configuration classpath is incomplete or contains conflicting ver
4 org.hibernate.console.HibernateConsoleRuntimeException:
5 Received a NoClassDefFoundError, probably the console configuration classpath is incomplete or contains conflicting ver
6 Received a NoClassDefFoundError, probably the console configuration classpath is incomplete or contains conflicting ver
7 java.lang.NoClassDefFoundError: org/apache/commons/collections/MultiMap
8 org/apache/commons/collections/MultiMap
9 java.lang.ClassNotFoundException: org.apache.commons.collections.MultiMap cannot be found by org.jboss.tools.hiber
10 org.apache.commons.collections.MultiMap cannot be found by org.jboss.tools.hibernate.runtime.v_5_1_5.0.1.Final-v20

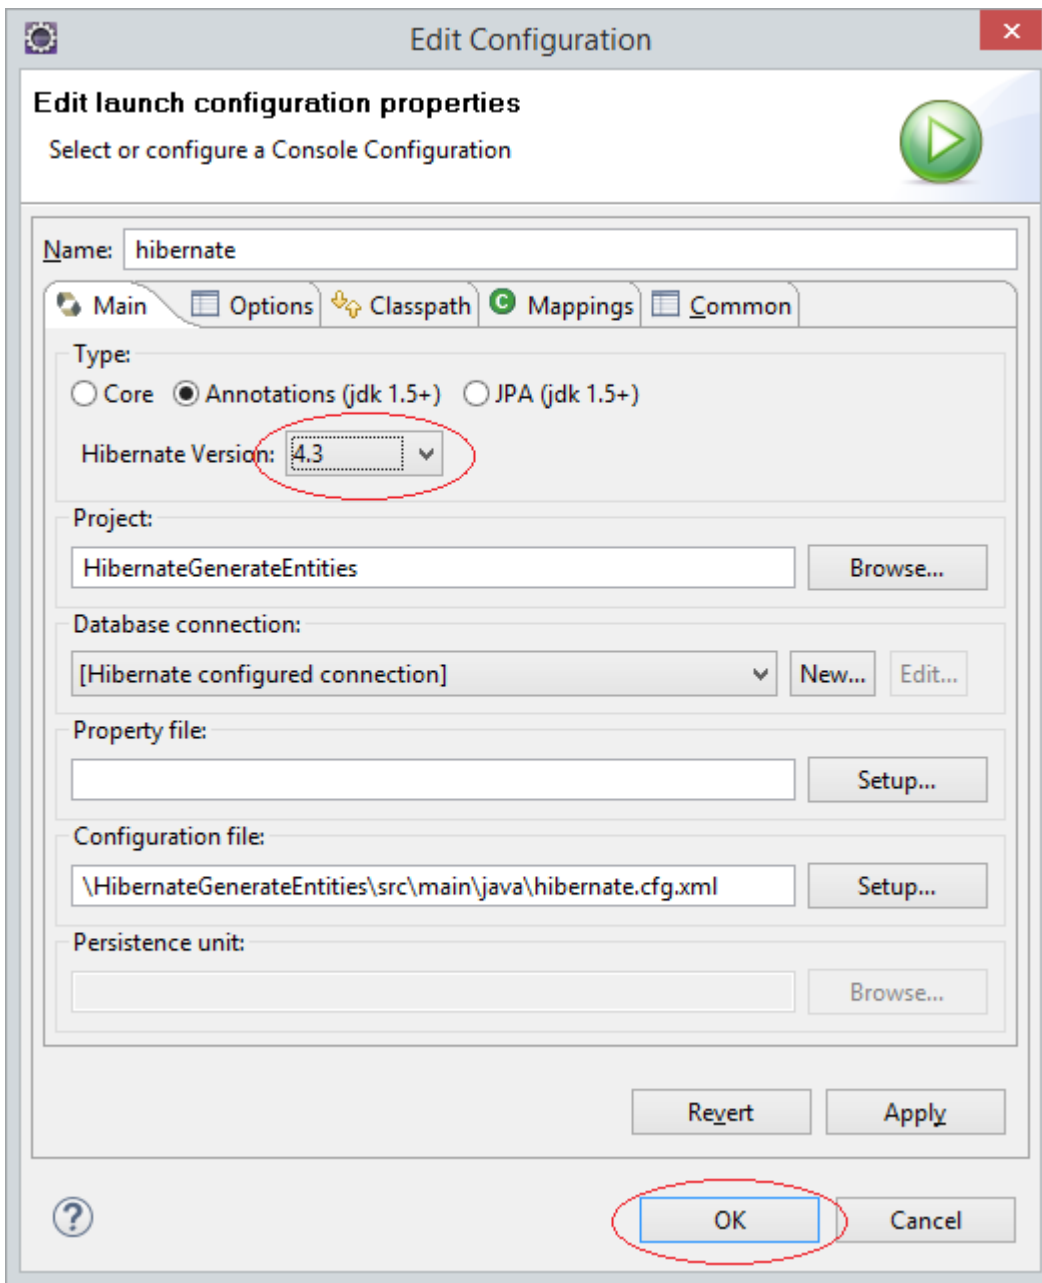

```

You need to configure to use an older version of **Hibernate**.

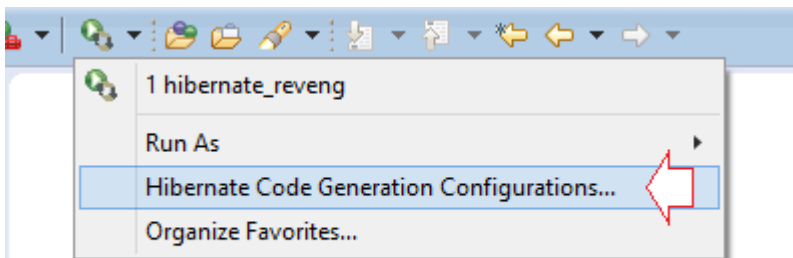

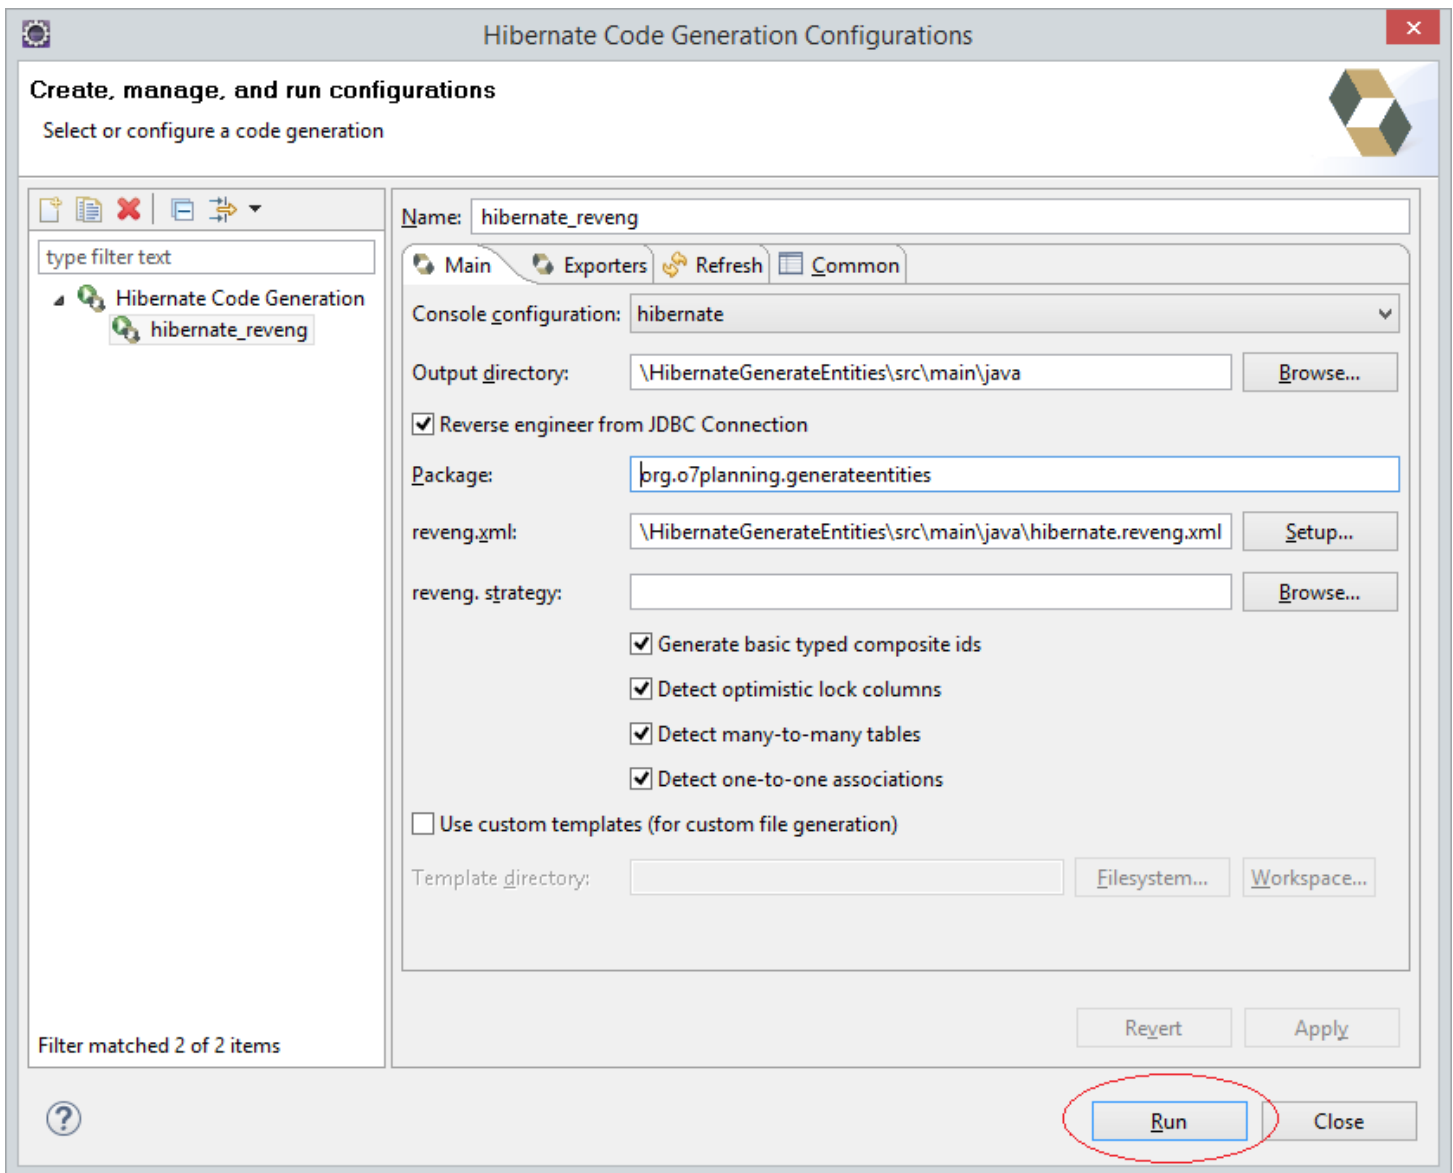

And rerun to generate the **entities**:
